# P2P Dataflow and Integration points

## Overview P2P

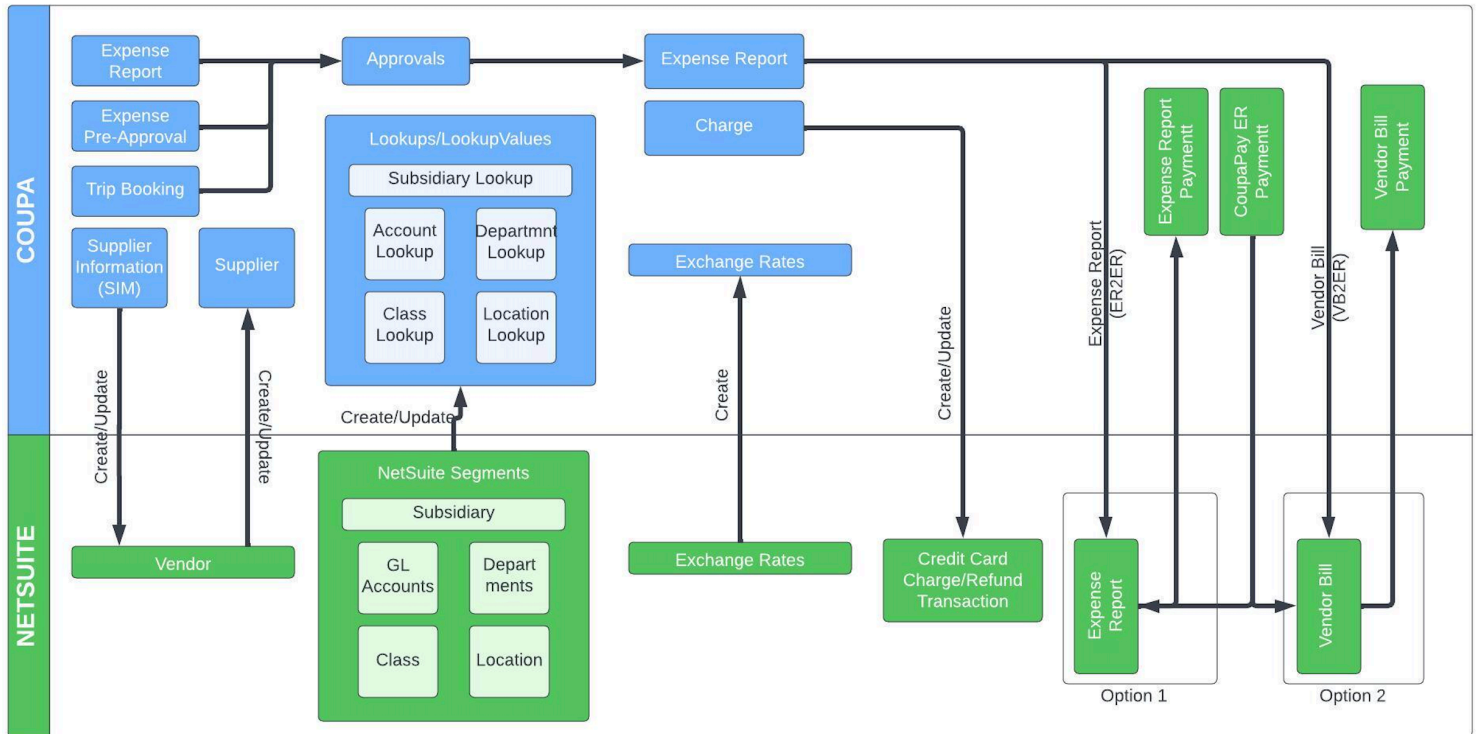

The diagram below indicates the integration points between Netsuite and Coupa. Typically we have master data - suppliers, Netsuite GL Account attributes, exchange rates and transaction data - bill payments coming from Netsuite into Coupa and approved invoices going from Coupa into Netsuite.

Customers using Coupa Pay may take Virtual Card Charges for PO Payments from Coupa to Netsuite as Credit Card Transactions and Coupa Invoice Payments from Coupa to Netsuite as Vendor Bill Payments. (highlighted red)

With SIM (Supplier Information Management), new supplier records can be initiated via a supplier information request from within Coupa. Once all the information is populated, the supplier record is created in NetSuite and simultaneously activated in Coupa. The diagram below indicates the additional integration points which include SIM.

## Overview Expenses

## Integration Method

Coupa integrates seamlessly with Netsuite using the Coupa REST API and Netsuite’s Suitescript. Coupa provides rich, robust access to read, edit, or integrate data via a [RESTful API](#). This UTF-8 XML based interface allows you to create, update, and take action on individual records within Coupa by making an HTTP request call.

Built on industry standard JavaScript that ensures portability and rapid developer productivity, SuiteScript enables full-featured application-level scripting capabilities throughout NetSuite. Suitescript provides a complete set of flexible scripting models to support customization needs, including user event-based scripts and scheduled scripts. The Coupa Netsuite Integrations have been built to meet and comply with the documented practices for architecture, development, privacy and security of the Netsuite SuiteCloud platform and is certified and approved by the [“BUILT FOR NETSUITE”](#) program.

Coupa Netsuite Bundle scripts should not be modified. Modified scripts will not be supported by Coupa Support.

### Client Installation/Upgrade Overview

Coupa leverages SuiteBundler, which makes it easy to package and deploy customizations and applications, built on the SuiteCloud platform. Whether you are moving customizations from a sandbox environment to production or looking for the latest Coupa to Netsuite integration package, SuiteBundler lets you easily manage groups of customizations, manage versioning and deploy customizations nearly instantaneously.

### Activities

You will need to do the following to deploy the Coupa / Netsuite Bundler

- 1 Locate the Coupa Bundle Script
- 2 Confirm contents of the Bundle
- 3 Install the Bundle
- 4 Confirm successful installation of the Coupa Bundle
- 5 Begin configuration

## Locate the Coupa Bundle Script

### Step 1.1

Ensure you have given your Netsuite Account ID to your Coupa Implementation Manager.

Locate the Bundler

**Navigation Path:** Customization | SuiteBundler | Search & Install Bundles

The screenshot shows the Netsuite Customization Manager interface. The 'Customization' menu is open, displaying options: Lists, Records, & Fields; Forms; Scripting; Plug-ins; Centers and Tabs; SuiteBundler; and Bundle Audit Trail. The 'SuiteBundler' option is selected, and its sub-menu is visible, showing 'Create Bundle' and 'Search & Install Bundles'.

### Step 1.2

Search for “Coupa P2P + Expenses” and click on Bundle

The screenshot shows the 'Search & Install Bundles' page. The search bar contains the text "Coupa P2P + Expenses". Below the search bar, there is a table with the following data:

NAME	BUNDLE ID
Coupa P2P + Expenses Bundle	84306

## Confirm & Install contents of the Bundle

### Step 1.3

Switch to the Components View and verify the contents match below:

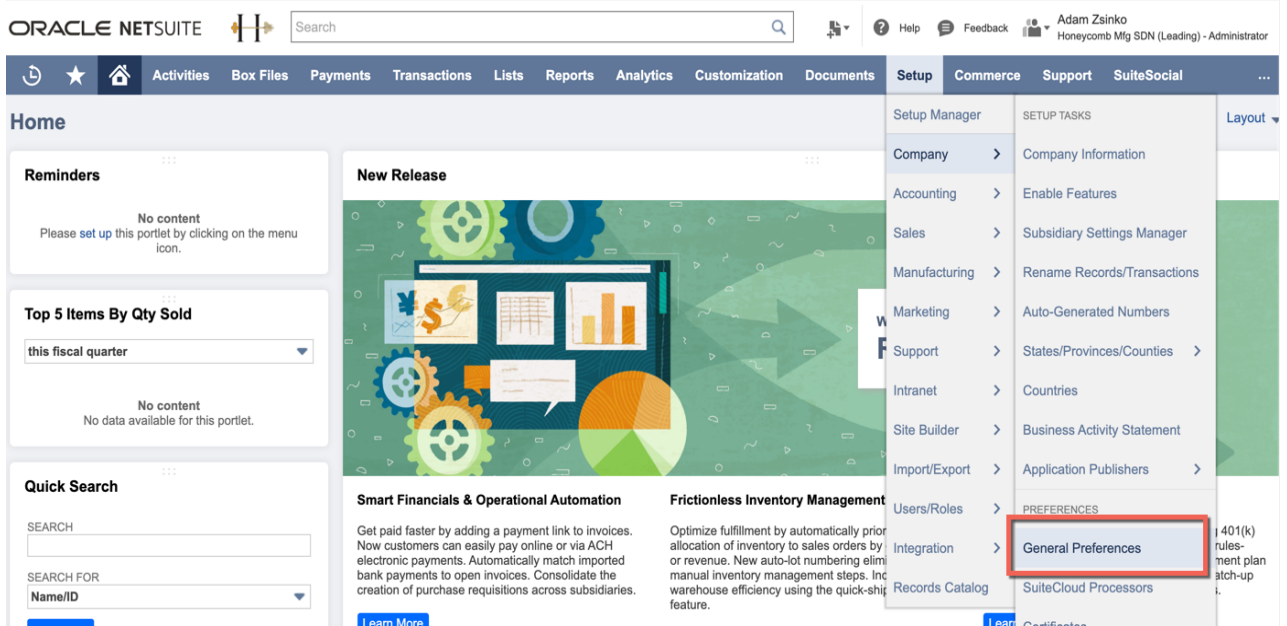

NAME	ID
<b>Custom Fields</b>	
<b>Transaction Body Fields</b>	
 CoupaER Number	custbody_coupa_er_number
 Coupa Revision Number	custbody_coupa_er_internalrevision
<b>Transaction Column Fields</b>	
 Coupa ERReason	custcol_coupa_er_reason
 Coupa ER Description	custcol_coupa_er_desc
 CoupaER Line Id	custcol_coupa_er_lineid
<b>Custom Lists/Records</b>	
<b>Lists</b>	
 Coupa Vendor PhoneFax List (3 records)	customlist_vendor_phonifax_list
<b>File Cabinet</b>	
<b>Files</b>	
 Coupa-VendorPayment.js	7072
 Coupa-FxRate.js	7074
 Coupa-ExpenseReport.js	7070
 Coupa-Invoice.js	7071
 Coupa-DynamicAcct.js	7069
 Coupa-Vendor.js	7073
<b>Saved Searches</b>

 Coupa Vendor Integration	customscript_coupa_vendor

## Configuration of the Bundle

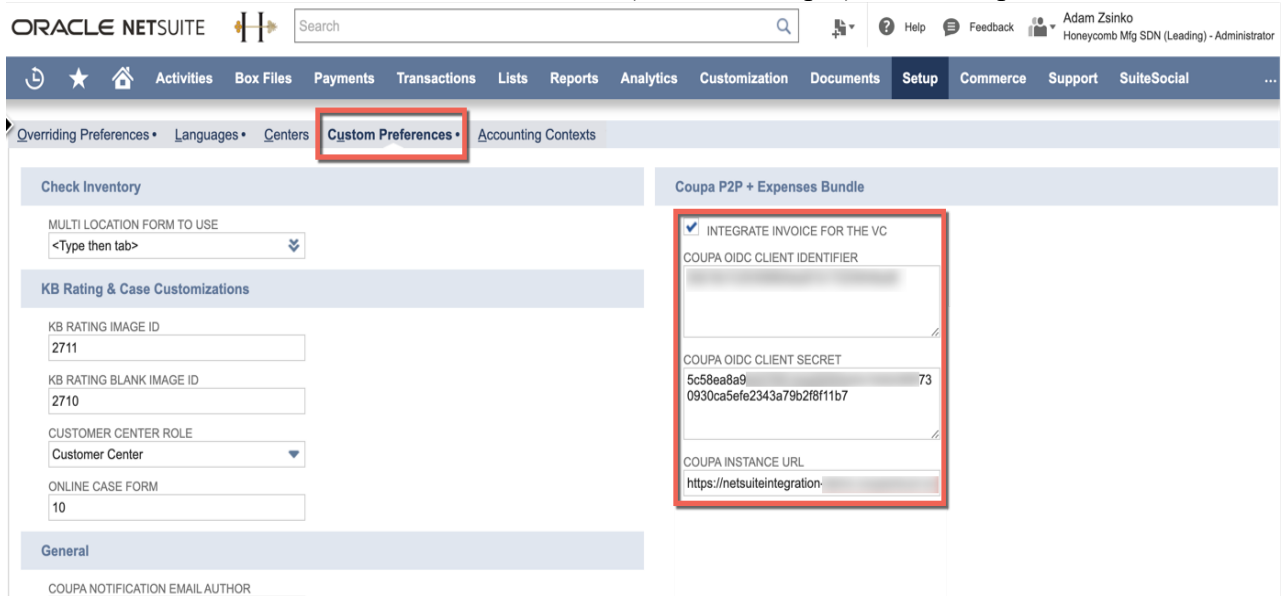

- API - OIDC configuration (optional)

With Coupa Release 31 secure Auth 2.0 API connectivity has been introduced. Netsuite Bundle is supporting this new API connectivity method.

1. Create OIDC connection as per [Coupa Success Article](#)
2. Setup OIDC scope for read/write for the objects integrated via the Netsuite Bundle
3. Login to Netsuite and go to **Setup > Company > General Preferences > Custom Preference**

4. Enter ClientID, Client Secret & OIDC URL (created in step 2) under Coupa P2P Bundle section

# Netsuite Vendor to Coupa Supplier 2.0

## Overview

**PLEASE UPGRADE YOUR VENDOR SCRIPT TO VENDOR 2.0 SCRIPT. Vendor 1.0 script will be deprecated and will NOT be maintained from release 15.0.0 onwards.**

This integration syncs up Vendor records between Netsuite and the Supplier record in Coupa. Netsuite is the vendor master and the records flow from Netsuite into Coupa. The User Event Suitescript is used to capture the “create” and “update”/“delete” events. Based on the event type either a new Supplier is created in Coupa or an existing Supplier in Coupa is updated. On the Vendor record in Netsuite you can set if you want to integrate the record to Coupa.

## Script Sequence Explained

This integration is real time as the Vendor record is created/updated in Netsuite

- The Coupa API call to create/update the supplier record is called as soon as the Netsuite user event is captured
- The `nlapiLoadRecord('vendor', recordid)` function is used to read the Netsuite vendor record
- The `nlapiRequestURL` function is used to do a HTTP POST/PUT to create/update the supplier record in Coupa.

## Deployment Parameter Setup

Now that you have successfully installed the bundle, you will need to decide which parameters are relevant for your Coupa implementation.

## Activities

You will need to do the following to ensure a successful deployment of the Coupa Vendor Integration Script

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Ensure your vendor record in Netsuite is associated with the appropriate subsidiary values and currency association.
- Ensure the supplier name is unique in Coupa
- Only load NetSuite vendors in Coupa that you will create transactions for in Coupa
- Once vendor records are created in Coupa ensure supplier record has appropriate Coupa configuration based on your business process

## Pre-Requisites

- Coupa P2P & Expenses Bundle deployed
- Coupa API Key or OIDC auth created
- You will need to baseline the Coupa Suppliers via the CSV UI Loader

1

**Review Parameter List Vendor 2.0**

Review parameter list and decide which ones are relevant to your company’s implementation of Coupa.

Please note the fields that are mandatory are noted with an asterisk \*

Script parameters

Script Definition					Script Deployment	
Label	Explanation	Id	Type	Comments	Example	Your Value
<b>Coupa Instance URL*</b>	The Coupa instance the integration connects to	custscript_coupa_vi_mr_host_url	hyperlink		https://abc.coupa host.com	
<b>Error Email Receiver*</b>	Error recipient	_custscript_coupa_vi_mr_email_receiver	Free-Form Text		<a href="mailto:abc@abc.com">abc@abc.com</a> , <a href="mailto:abcd@abcd.com">abcd@abcd.com</a>	
<b>Error Email Sender</b>	Error email sender	custscript_coupa_vi_mr_email_sender	List/Record			
<b>Account Name*</b>	As per standard, it will be company name with which environment its been setup (Test or Prod)	custscript_coupa_vi_mr_account_name	Free-Form Text	<Test/Prod>	Coupa Test	
<b>Include in Coupa Field ID</b>	Configuration that allows/disallows a supplier record to be sent to Coupa	custscript_coupa_vi_mr_integration_flag	Free-Form Text	Internal id of an existing field or custom field.  The custom field on the vendor record should be a checkbox		
<b>Invoice Matching Level</b>	Invoice matching level that is defined for this supplier.	custscript_coupa_vi_mr_invoice_match_level	Free-Form Text	If no parameter is defined 2-way match will default for all records.  2-way or 3-way or :NetSuite_field_id	2-way	
<b>Payment Method</b>	Payment method	custscript_coupa_vi_mr_payment_method	Free-Form Text	if there’s no default value, please set it as :customfield or :existingfieldname from where the script will get the value. Value can be invoice or coupa_pay	invoice	

Script Definition					Script Deployment	
Label	Explanation	Id	Type	Comments	Example	Your Value
<b>Invoice Emails IDs</b>	Registered email addresses allowed to send invoices	custscript_coupa_vi_mr_invoice_emails	Free-Form Text			
<b>Send Invoice To Approvals</b>	If yes, then invoices will all be sent thru approvals, regardless of total amount.	custscript_coupa_vi_mr_route_inv_for_app	Free-Form Text	the value could be default:customfield  if there's no default value, please set it as :customfield or :existingfieldname from where the script will get the value. if there's only default, enter only default value	Yes	
<b>Allow Invoicing From CSP</b>	If yes, then the supplier can create invoices against their POs or Contracts in CSN	custscript_coupa_vi_mr_allow_csp_invoice	Free-Form Text	the value could be default:customfield  if there's no default value, please set it as :customfield or :existingfieldname from where the script will get the value. if there's only default, enter only default value	Yes:	
<b>Content Group Field ID</b>	Allows the supplier record in Coupa to be associated with content group(s)	custscript_coupa_vi_mr_content_grp_value	Free-Form Text	the value should be the internal id of the field that holds the name of the content field. Multiple content groups are delimited by , (comma)	_coupa_content_group	
<b>Use Company Name as Display Name</b>	Use Company Name as Display Name in Coupa	custscript_coupa_vi_mr_use_display_name	Check-box			
<b>Skip Syncing Phone Number to Coupa</b>	Skip phone number integration	custscript_coupa_vi_mr_skip_phone_number	Check-box			
<b>Override PO Method</b>	Allows overriding the standard mapping for the PO Email field	custscript_coupa_vi_mr_po_method_override	Free-Form Text	the value should be the internal id of the field that holds the PO emails. Multiple POs can be delimited by , (comma)	_coupa_poemail	

Script Definition					Script Deployment	
Label	Explanation	Id	Type	Comments	Example	Your Value
<b>Skip PO Method Update</b>	Skip Po Method integration on Vendor Update	custscript_coupa_vi_mr_skip_pomethod	Check-box			
<b>PO Email Override</b>		custscript_coupa_vi_mr_po_email_override	Free-Form Text			
<b>Custom Fields Count*</b>	Define the number of custom fields to be integrated.	_vendor_customfieldscount	Integer Number	0,1,2,...	0	
<b>Content Group Field ID</b>		custscript_coupa_vi_mr_content_grp_value	Free-Form Text			
<b>Content Group Mapping</b>	Map subsidiary to Coupa Content Group	custscript_coupa_vi_mr_content_grp_map	Free-Form Text		NetSuite_Subsidiary_Name1==Coupa_Content_Group1;NetSuite_Subsidiary_Name2==Coupa_Content_Group2	
<b>Custom Body Field Mappings</b>	Map custom	custscript_coupa_vi_mr_custom_body_field	Free-Form Text			
<b>Enable Chart of Accounts Sync</b>		custscript_coupa_vi_mr_sync_coa_values	Check-box		T or F	
<b>Skip Syncing Remit-To Addresses to Coupa</b>	Skipping the remitto mapping	custscript_coupa_vi_mr_skip_rta_sync	CheckBox		T or F	
<b>Coupa Supplier ID Field's ID</b>		custscript_coupa_vi_mr_vendor_id_field	Free-Form Text			
<b>NetSuite Subsidiary to Coupa Custom Field</b>		custscript_coupa_vi_mr_sub_s_to_custfield	Free-Form Text			

## Review Parameter List User Events for Vendor 2.0

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script Definition					Script Deployment	
Label	Explanation	Id	Type	Comments	Example	Your Value
Include in Coupa Field ID	internID of the checkbox field on Vendor Record	custscript_coupa_vi_ue_integration_flag	FreeForm-text		internID of the checkbox field on Vendor Record	
Coupa Instance URL	Coupa host	custscript_coupa_vi_ue_host_url	Hyperlink			
Account Name		custscript_coupa_vi_ue_account_name	FreeForm-text			
Error Email Receiver	Receiver for Errors	custscript_coupa_vi_ue_error_email_to	Text			
Error Email Sender	Sender for Error emails	custscript_coupa_vi_ue_error_email_from	List/record			
Update Tax registration	Update Tax registration	custscript_coupa_update_tax_reg	Checkbox		Added 17.0.0	

## 2 Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts  
Find the “Coupa Vendor Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

### Script Deployment

The screenshot shows the 'Script Deployment' interface for the script 'Coupa Netsuite Vendor User Event'. The 'Parameters' tab is selected, and a red arrow points to it. The interface includes a top navigation bar with 'List', 'Search', and 'More' options. Below the navigation bar, there are several tabs: 'Audience', 'Scripts', 'Parameters', 'Execution Log', and 'History'. The 'Parameters' tab is active, displaying a grid of input fields for various parameters. The 'Parameters' tab is highlighted with a red arrow.

Parameter Name	Value
COUPA URL	
COUPA API KEY	
ERROR EMAIL NOTIFICATION ADDRESS	
ACCOUNT NAME	
PHONE/FAX FORMAT	
INVOICE MATCHING LEVEL	
PAYMENT METHOD	
INVOICE EMAILS	
SEND INVOICE TO APPROVALS	
ALLOW INVOICING FROM CSN	
CUSTOM FIELDS COUNT	
CUSTOM FIELD 1	

After you are done you can click the Save button and now the Script is successfully deployed.

## 2 Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts  
Find the “Coupa Vendor Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

### Script Deployment

The screenshot shows the 'Script Deployment' interface for the script 'Coupa Netsuite Vendor User Event'. The 'Parameters' tab is selected, and a red arrow points to it. The interface includes a top navigation bar with 'List', 'Search', and 'More' options. Below the navigation bar are buttons for 'Save', 'Cancel', 'Reset', 'Change ID', and 'Actions'. The main content area is divided into two columns. The left column contains fields for 'APPLIES TO' (set to 'Vendor'), 'ID' (set to 'customdeploy2'), and a 'DEPLOYED' checkbox. The right column contains dropdown menus for 'STATUS' (set to 'Released'), 'EVENT TYPE', 'LOG LEVEL' (set to 'Audit'), and 'EXECUTE AS ROLE' (set to 'Current Role'). The 'Parameters' tab contains a grid of input fields for various parameters: COUPA URL, COUPA API KEY, ERROR EMAIL NOTIFICATION ADDRESS, ACCOUNT NAME, PHONE/FAX FORMAT, INVOICE MATCHING LEVEL, PAYMENT METHOD, INVOICE EMAILS, SEND INVOICE TO APPROVALS, ALLOW INVOICING FROM CSN, CUSTOM FIELDS COUNT, and CUSTOM FIELD 1.

After you are done you can click the Save button and now the Script is successfully deployed.

# Coupa SIM Supplier to NetSuite Vendor

## Overview

If you have purchased the SIM module, you will be able to create new suppliers in NetSuite via Coupa SIM integration. You will also be able to update them via integration. This integration allows you to standardize your supplier onboarding and require much of the vendor information to be provided directly by the supplier. Once provided, the information will be able to flow into NetSuite and create a new vendor or update it. Once the vendor is created in NetSuite, the Netsuite Vendor to Coupa Supplier activates the vendor in Coupa and updates the Coupa record with the SIM form information.

## Script Sequence Explained

This integration is scheduled as the Coupa SIM request triggers the creation of a pending supplier in Coupa which is only available for transactions after successfully creating a Vendor in Netsuite.

- The SIM request goes to the supplier
- The Supplier fills out the requested information and submits it back to your Coupa system
- The final SIM information is sync'd into Netsuite to create a new Netsuite Vendor record.
- The Coupa API call to update the Coupa supplier record is called as soon as the Netsuite vendor is updated which activates it in Coupa.
- The `nlapiLoadRecord('vendor', recordid)` function is used to read the Netsuite vendor record
- The `nlapiRequestURL` function is used to do a HTTP POST/PUT to update the supplier record in Coupa.

## Deployment Parameter Setup

Now that you have successfully installed the bundle, you will need to decide which parameters are relevant for your Coupa implementation.

## Tips to help you succeed

- Ensure you have purchased SIM
- Ensure you have created your SIM Forms for New Supplier, External Supplier and Internal Supplier updates.
- Create your SIM Sequential Form Mappings or your previously created NetSuite suppliers, trigger the information request using the Supplier list in Coupa.

## Pre-Requisites

- Coupa P2P & Expenses Bundle deployed
- Coupa API key or OIDC auth created with custom permissions

## Activities

You will need to do the following to ensure a successful deployment of the Coupa SIM Integration Script

### 1 Review Parameter List

### 2 Find and Define Deployment Parameter Values

## Review Parameter List

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script parameters

Label	Description	Id	Type	Example	Comment
<b>Coupa URL*</b>	The Coupa instance the integration connects to	_coupa_sim_url	Free-	https://abc.coupahost.com	
<b>Coupa API Key*</b>	The API key for Coupa's REST based API	_coupa_sim_api_key	Free-Form Text	4dtyr7657fgfh5757fghhg Note: Don't forget to edit the permissions of the key, because the default API Key permissions did not yet include SIM as of R20	
<b>Vendor Mapping</b>	Defines the mappings between coupa SIM custom fields and netsuite custom fields for Vendor. In the example to the right, we want to make sure every new vendor is setup as "email" po method, so instead of using the default SIM PO Method, we create a custom field lookup, and only include email as the default lookup choice.	_coupa_sim_vendor_mapping	Free-Form Text	po-transmission-method/external-refnum==custen_tity_coupa_po_method_rec;default-commodity/id==custen_tity_coupa_default_commodity	
<b>Address Mapping</b>	Defines the mappings between coupa SIM custom fields and netsuite custom fields for Addresses	_coupa_sim_address_mapping	Free-Form Text	Coupacustomfield1==NScustomfield1;Coupacustomfield2/id==NScustomfield2	
<b>Bank Rec Mapping</b>	Defines the mappings between coupa SIM custom fields and netsuite Bank record fields fields	_coupa_sim_bank_mapping	Free-Form Text	Coupacustomfield1==NScustomfield1;Coupacustomfield2/id==NScustomfield2	

Label	Description	Id	Type	Example	Comment
<b>Contact Rec Mapping</b>	Defines the mappings between coupa SIM custom fields and netsuite contact fields	<code>_coupa_sim_contact_mapping</code>	Free-Form Text	<code>Coupacustomfield1==NScustomfield1;Coupacustomfield2/id==NScustomfield2</code>	
<b>Default Subsidiary ID</b>	Defines the default subsidiary ID if subsidiary is not mapped using custom below	<code>_coupa_sim_default_sub</code>	Free-Form Text	i.e. 5	
<b>Custom Subsidiary Coupa ID</b>	Defines Coupa SIM custom field which houses the NetSuite Subsidiary. This will define the primary subsidiary in the netsuite vendor record	<code>_coupa_sim_custom_sub</code>	Free-Form Text	subsidiary/external-ref-num	
<b>“TO” Email Addresses for errors</b>	Where to email errors in this integration	<code>_coupa_sim_error_to</code>	Free-Form Text	tim@gogogo.com	
<b>“FROM” Email address for errors</b>	Who will be displayed as the sender in those error emails	<code>_coupa_sim_error_from</code>	Free-Form Text	tim@gogogo.com	
<b>Vendor “INCLUDE IN COUPA” Parameter ID</b>	This allows the SIM interface to check the box on the new Netsuite Vendor record which causes the vendor integration to include this new vendor in future integrations.	<code>_coupa_sim_vendor_include</code>	Free-Form Text	<code>custentity_vendor_include_in_coupa</code>	
<b>Payment File Format ID</b>	This is the coupa custom field which houses the <code>custrecord_2663_entity_file_format</code> for future payments to this vendor. Newly created bank details will be marked as Primary, and the existing primary record will be demoted.	<code>_coupa_sim_payment_format</code>	Free-Form Text	netsuite-payment-file-format/external-ref-num	
<b>Vendor Integration PO METHOD</b>	This is where to store the PO Method.	<code>_coupa_po_method_parameter</code>	Free-Form Text	Netsuitecustomfield1	
<b>Use Display Name as Company Name</b>	This will override the Supplier Name with the whatever was specified in the “Display Name”	<code>_coupa_sim_display_name</code>	Free-Form Text	<Checkbox>	
<b>Multiselect Subsidiary</b>	Add support for Multi subsidiary on vendor recording in NS	<code>custscript_coupa_sim_multiselect</code>	Check box		Added 6.0.1
<b>*Skip bank Account Details</b>	Skip integrating bank account details	<code>_coupa_sim_bank_sync</code>	Free Form Text	T/F	Updated 10.0.0
<b>*Custom Bank Module</b>	AvidXBank support	<code>_sim_custom_bank</code>	CheckB ox	T/F	
<b>Support for tax code mapping</b>	Support for tax code mapping on SIM form	<code>custscript_coupa_sim_use_tax_reg_num</code>	CheckB ox	T/F	
<b>Use Approved for payment date?</b>		<code>Custscript_coupa_sim_rta_pymt</code>	CheckB ox		

Label	Description	Id	Type	Example	Comment
		<i>_format</i>			
<b>Update Subsidiary</b>	Used to support updating subsidiary mapping	<i>custscript_coupa_update_subsidiary</i>	checkbox x		Added 16.1.0

## 2 Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts  
Find the “Coupa SIM Integration” script deployment

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

After you are done you can click the Save button and now the Script is successfully deployed.

### Special Considerations with the SIM Bundle

- You must have a Primary Contact with a First Name, Last Name, and Email address, in the NetSuite Vendor or you will not be able to trigger an external SIM update form from the Coupa supplier record. This is especially applicable for initial production cutover when you integrate all of your Netsuite Vendors into Coupa expecting to phase them into SIM over time.
- If you allow a supplier or internal user to set the default Commodity Code in SIM, it will integrate over to Netsuite, but it will not integrate back into Coupa from the Netsuite Vendor record without modifying the Vendor Suite Script.

# Netsuite to Coupa Exchange Rates 2.0

## Overview

This integration syncs up Currency Exchange Rates between Netsuite and Coupa. NetSuite is the Exchange Rates master and the records flow from Netsuite into Coupa. The Scheduled SuiteScript is used to capture the “create” events and that will call the Coupa POST API to create the new entry. It will also create the inverse entry in Coupa.

**From Bundle Release 6.0.1 Exchange Rate script 2.0 is introduced. Please upgrade to use this new script.**

**Exchange Rate script 1.0 will not be supported from 8.0.0.**

## Script Sequence Explained

This integration is scheduled per your requirements to support the Currency Exchange Rates record in Netsuite

- The Coupa API call to create the Currency Exchange Rates record is called on a predefined schedule
- The `nlapiLoadRecord(currency)` function is used to read the Netsuite currency record
- The `nlapiRequestURL` function is used to do a HTTP PUT to create the corresponding Exchange Rate records in Coupa

## Activities

You will need to do the following to ensure a successful deployment of the Coupa Vendor Integration Script

**1 Review Parameters**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Ensure your currency codes in Coupa are enabled
- Only load exchange rates in Coupa that you will create transactions for

## Pre-Requisites

- Coupa P2P & Expenses Bundle scheduled
- Coupa API key or OIDC Auth created

## Review Parameter List

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

### Script parameters

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Value
<b>Coupa URL*</b>	The Coupa instance the integration connects to	_coupa_fxrates_url	Free-Form Text		https://abc.coupahost.com	
<b>Coupa API Key*</b>	The API key for Coupa's REST based API	_coupa_fxrates_apikey	Free-Form Text	A Coupa Admin can generate the Coupa API Key in Coupa https://xxxx.coupahost.com/api_keys	4dtyr7657fgfh5757fghhg	
<b>Error Email Notification Address</b>	Email addresses to which exception emails to be sent	_coupa_fxrates_erroremailnotify	Free-Form Text		<a href="mailto:abc@abc.com">abc@abc.com</a> , <a href="mailto:abcd@abcd.com">abcd@abcd.com</a>	
<b>Account Name*</b>	As per standard, it will be company name with which environment its been setup (Test or Prod)	_coupa_fxrates_accountname	Free-Form Text	<Company Name> <Test/Prod>	Coupa Test	
<b>UTC Offset</b>	The <i>UTC offset</i> is the difference in hours and minutes from Coordinated Universal Time	_coupa_fxrates_utcoffset	Integer Number		10	
<b>Error Email From</b>	Error Email sender	custscript_coupa_fxrate_mr_error_from	Free-Form Text			Added P2P 6.0.1 and P2O 2.0.0
<b>Error Email to</b>	Error Email Recipient	custscript_coupa_fxrate_mr_error_to	Free-Form Text			Added P2P 6.0.1 and P2O 2.0.0

## Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts  
Find the “Coupa Exchange Rate Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

### Script Deployment

The screenshot shows the Netsuite interface for script deployment. The 'Script Deployment' page is open for the 'CoupaFXRates Integration' script. The 'Parameters' tab is selected, and a red arrow points to it. The 'DEPLOYED' checkbox is checked. The 'Parameters' section contains the following fields:

Field Name	Value
COUPA URL	
ACCOUNT NAME	
COUPA API KEY	
UTC OFFSET	
ERROR EMAIL NOTIFICATION ADDRESS	

After you are done you can click the Save button and now the Script is successfully deployed

# Dynamic - Coupa Chart of Account 2.0

## Overview

This integration syncs up key parts of your Netsuite Chart of Account (COA) definition between Netsuite and the Chart of Accounts in Coupa. Netsuite is the COA master and the valid values for each segment flow from Netsuite into Coupa. The User Event Suitescript is used to capture the “create” and “update” events. Based on the event type either a new value is created in Coupa or an existing entry in Coupa is updated.

**From Bundle Release 14.0.0 COA script 2.0 is introduced.**

**Please upgrade to use this new script.**

**COA script 1.0 will not be supported from 16.0.0**

## Script Sequence Explained

This integration is real time as the Netsuite Chart of Account record is created/updated it will then be reflected in Coupa

- The Coupa API calls to create/update the LookUp Values in Coupa as soon as the Netsuite user event is captured
- The `nlapiLoadRecord('vendor', recordid)` function is used to read the Netsuite vendor record
- The `nlapiRequestURL` function is used to do a HTTP POST/PUT to create/update the supplier record in Coupa.

## Activities

You will need to do the following to ensure a successful deployment of the Coupa Vendor Integration Script

- 1 Define Coupa Lookups and Coupa Chart of Accounts**
- 2 Review Parameters**
- 3 Review Scripts**
- 4 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Each Subsidiary can be a separate Chart of Account in Coupa if you require granularity based on your Netsuite COA setup
- The delivered script will create Lookup Values in Coupa for the following: Subsidiary, Class, Account, Department, Location
- If you need segments based on other values than above, Coupa can support that with integration via our lookup tables. Please ask your implementation consultant.

## Pre-Requisites

- Coupa P2P & Expenses Bundle deployed
- Coupa API key or OIIC Auth created
- Lookups objects & COA defined in Coupa
- You will need to baseline the Coupa Lookup Values via the CSV UI Loader
- Add “Include in Coupa” Checkbox custom field in Netsuite, on the appropriate objects you are using as part of your Netsuite COA

## Define Coupa Lookups and Coupa Chart of Accounts

### Summary:

The dynamic accounting script, transforms creates, and edits on departments, classes, locations, accounts and subsidiaries into Lookup Values in Coupa. Marking a record in Netsuite as inactive will mark the Lookup Value in Coupa as inactive. Name and hierarchical changes to all records (except Subsidiary) will be reflected in Coupa by a name change to the Lookup Value.

### Configuration Decisions:

Define your Coupa Chart of Accounts based on the number of Netsuite subsidiaries that you have.

Your Chart of Account name must equal the NetSuite Subsidiary name

In Netsuite Dynamic Accounting Checkbox turned on in the deployment parameters of this script

Delete the COA related deployment objects that are not relevant for your implementation.

You will need to have the “Include In Coupa” checkbox created for each COA related object

Subsidiary Account Segment Parameter will be Segment-1, Segment-2, etc...based on your Coupa COA definition

### Naming / Formatting Conventions:

Based on your implementation define the Coupa Lookups with the following naming convention, where XYZ is the name of your Coupa Chart of Account

acct\_XYZ

dept\_XYZ

clas\_XYZ

locn\_XYZ

subs\_XYZ

On the Coupa Lookup Object the following must be adhered to ensure referential integrity between Coupa and Netsuite:

Accounts, the account number must be the leading part of the name and the external reference number. Please see below for example:

Lookup	Name	Description	External Ref Num	Default	Active	External Ref Code	Parent Name	Actions
acct_Square, Inc.	4000 Sales	None	4000	No	Yes	03849314000	038493 Testing Expense C	
acct_Looper Holdings LLC	4000 Sales	None	4000	None	No	4000	None	
acct_Square K.K. (Japan)	4000 Sales	None	4000	None	No	4000	None	
acct_Squareup Pte. Ltd.	4000 Sales	None	4000	None	No	4000	None	
acct_[Square, Inc. Eliminations]	4000 Sales	None	4000	None	No	4000	None	

Per page 15 | 45 | 90

- For all other look up values, the name can be anything but the Netsuite Internal ID must be in the external reference number. Please see below for example:

**Lookup Values**

Showing results for dept\_americas x

Lookup	Name	Description	External Ref Num	Default	Active	External Ref Code	Parent Name	Actions
dept_AMERICAS	Sales	None	3	None	Yes	3	None	
dept_AMERICAS	Engineering : Development : Integrations	None	15	None	Yes	15	None	
dept_AMERICAS	Sales : Test notinclude on create	None	16	None	Yes	16	None	

Per page 15 | 45 | 90

- Examples:
  - [Multiple Coupa Chart of Accounts](#): that has 3 Netsuite subsidiaries named US, UK and CA; all utilizing account, department and class.
- Lookups defined in Coupa:

**Lookups**

View NS

Name	Description	Active	Actions
acct_US	acct_US	Yes	
acct_UK	acct_UK	Yes	
acct_CA	acct_CA	Yes	
dept_US	dept_US	Yes	
dept_UK	dept_UK	Yes	
dept_CA	dept_CA	Yes	
clas_US	clas_US	Yes	
clas_UK	clas_UK	Yes	
clas_CA	clas_CA	Yes	
subs_US	subs_US	Yes	
subs_UK	subs_UK	Yes	
subs_CA	subs_CA	Yes	

Per page 15 | 45 | 90

Three Chart of Accounts would be created in Coupa. Here is the US example:

### Chart Of Accounts Create

\*Name  [i]

\*Currency

---

#### Account Segments and Defaults

I'll load all of the valid combinations  
 I'll define the values segment by segment

	Purchase request defaults	Expense report defaults
*Segment 1 <input type="text" value="subs"/>	default by <input type="text" value="None"/>	default by <input type="text" value="None"/>
	<input checked="" type="radio"/> This segment is a simple list defined in <input type="text" value="subs_US"/>	
Segment 2 <input type="text" value="dept"/>	default by <input type="text" value="None"/>	default by <input type="text" value="None"/>
	<input checked="" type="radio"/> This segment is a simple list defined in <input type="text" value="dept_US"/> <input type="radio"/> This segment depends on <input type="text"/>	
	<input type="checkbox"/> This segment is required	
Segment 3 <input type="text" value="class"/>	default by <input type="text" value="None"/>	default by <input type="text" value="None"/>
	<input checked="" type="radio"/> This segment is a simple list defined in <input type="text" value="clas_US"/> <input type="radio"/> This segment depends on <input type="text"/>	
	<input type="checkbox"/> This segment is required	
Segment 4 <input type="text" value="acct"/>	default by <input type="text" value="None"/>	default by <input type="text" value="None"/>
	<input checked="" type="radio"/> This segment is a simple list defined in <input type="text" value="acct_US"/> <input type="radio"/> This segment depends on <input type="text"/>	
	<input type="checkbox"/> This segment is required	

## Review Parameter List - Script 2.0

Review parameter list and decide which ones are relevant to your company’s implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script parameters

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Value
<b>Coupa URL*</b>	The Coupa instance the integration connects to	custscript_coupa_coa_host	Free-Form Text		https://abc.coupa host.com	
<b>Error Email Receiver</b>	The API key for Coupa’s REST based API	_coupa_accs_api key	Free-Form Text			
<b>Error Email Sender</b>	Error email sender	custscript_coupa_c oa_email_from	List/Record			
<b>Account Name</b>	Error email Subject	custscript_coupa_c oa_acc_name	Free-Form Text			
<b>Include in Coupa Field ID</b>		custscript_coupa_c oa_sync_2_coupa	Free-Form Text			
<b>Lookup Name Prefix</b>	Lookup Prefix	custscript_coupa_c oa_segment_prefix	Free-Form Text			
<b>Use External ID</b>	Inetrnal ID usage indicator	custscript_coupa_c oa_use_external_id	Check Box			
<b>Custom Name Field ID</b>	Custom fiel mapping	custscript_coupa_c oa_name_field	Free-Form Text		The Custom Name field is used to change where we pull the name from in NetSuite if you want it to use something other than the default name syncing from NetSuite to Coupa.  It does not allow mapping for a custom field syncing from NetSuite to Coupa.	
<b>Parent Field ID</b>	Parrent field ID	custscript_coupa_c oa_parent_field	Free-Form Text			
<b>Subsidiary Field ID</b>	Subsidiary ID	custscript_coupa_c oa_sub_field_id	Free-Form Text			
<b>Include in Coupa field ID on Subsidiary</b>		custscript_coupa_c oa_sub_include_fiel d	Free-Form Text			
<b>Non One World Subsidiary Name</b>	Indicate if the Netsuite instance is One World	custscript_coupa_n on_ow_coa_comp_n ame	Free-Form Text			

## Review Parameter List 1.0

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script parameters

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Value
<b>Coupa URL*</b>	The Coupa instance the integration connects to	_coupa_accs_url	Free-Form Text		https://abc.coupahost.com	
<b>Coupa API Key*</b>	The API key for Coupa's REST based API	_coupa_accs_api_key	Free-Form Text	A Coupa Admin can generate the Coupa API Key in Coupa https://xxxx.coupahost.com/api_keys	4dtyr7657fgfh5757fghhg	
<b>Email Addresses for Notif</b>	Email addresses to which exception emails to be sent	_coupa_accs_notify_email	Free-Form Text		<a href="mailto:abc@abc.com">abc@abc.com</a> , <a href="mailto:abcd@abcd.com">abcd@abcd.com</a>	
<b>Include in Coupa</b>	Id of the custom field (on the record this deployment applies to) to allow/disallow the transmission of the record to Coupa	_coupa_accs_cstmfldincludeonly	Free-Form Text	The Internal ID of an existing field or custom field.  This field should be a checkbox, and True if you wish the record to integrate	custrecord_include_loc_coupa	
<b>Subsid Include in Coupa</b>	Id of the custom field (on SUBSIDIARY records) to allow/disallow the transmission of the subsidiary to Coupa	_coupa_accs_dynamic_sub_includ	Free-Form Text	The internal ID of an existing field or custom field on the subsidiary record.  This field should be a checkbox and set to True if the subsidiary should be/is included in coupa	custrecord_include_subs_coupa	
<b>*Use External ID</b>	Allow using external ID from NS	_coupa_accs_extid	Check Box		T/F	

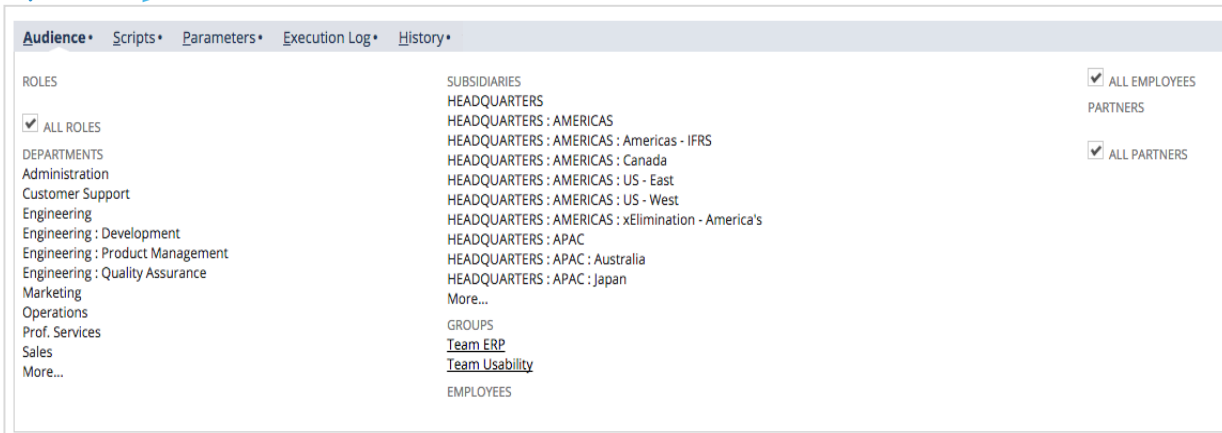

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Value
*Custom Segment Name	Applicable for custom segments	_coupa_accs_namefield	FreeForm		Name	
*Parent ID	Parent lookup values will be integrated	_parent_field_id	Freeform			
*Non One World System?	Support customer with non One World system	_coupa_accs_one_subsiidiary	Check Box		T/F	
*Custom Lookup name Prefix	Custom segment lookup name prefix	_lookup_name_prefix	Freeform			
*Custom Segment Subsidiary Field	Custom segment subsidiary mapping	_coupa_accs_subfield	FreeForm			
lookup name	For non OneWorld set lookup name	_custscript_coupa_accs_namefield	FreeForm	Added 12.0.0		
Change name convention	Use COA 1.0 mapping as LookupName to Account as "Account name + number"	custscript_coupa_change_naming_con	Check box	Added 16.1.0		

## Review Scripts

The bundle creates deployments for each possible segment. You need to delete/remove deployments for records you do not want to integrate

Make sure they deployments are enabled for all of the employees and subsidiaries

The bundle creates deployments for each possible segment. You need to delete/remove deployments for records you do not want to integrate

# Coupa Invoice to Netsuite Vendor Bill 2.0

## Overview

### **Coupa Invoice 1.0 Script is decommissioned since 7.0.0, please upgrade to Coupa Invoice 2.0 Script**

This integration syncs up Coupa Invoices and Netsuite Vendor Bill via a scheduled SuiteScript. The Coupa Invoice once approved is set for export and now is ready to be imported into NetSuite as the Vendor Bill. The Scheduled Suitescript is used to “create” the Vendor Bill which will call the Coupa HTTP GET API to retrieve the Coupa Invoice to generate the Vendor Bill in NetSuite

## Script Sequence Explained

This integration is on a schedule that you can set to meet your frequency and volume as Coupa Invoices are approved.

- The Coupa API call to create the Vendor Bill record is called on a predefined schedule
- The nlapiRequestURL function is used to perform a HTTP GET to retrieve the Coupa Invoice that is fully approved and not exported
- The nlapiCreateRecord (vendorbill) function is used to generate the NetSuite Vendor Bill

## Activities

You will need to do the following to ensure a successful deployment of the Vendor Script

### **1 Review Parameter List**

### **2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Ensure your NetSuite Vendors are assigned appropriate Subsidiaries in NetSuite
- This integration requires the Netsuite internal id for the Vendor Record to be stored in the “Supplier Number” field in Coupa
- Validate the Vendor Bill “isBillable” field is populating as expected
- If you need to pass Amortization Schedules please see parameter definition
- Voids are supported from Coupa to Netsuite assuming the Vendor Bill is not yet paid in Netsuite. Change the status of the invoice from "Approved" to "Rejected". See parameter definition for more details.

## Pre-Requisites

- Coupa P2P & Expenses Bundle deployed
- Coupa API key or OIIC Auth created
- Coupa Chart of Account SetupCoupa Suppliers with Netsuite Vendor ID

## Review Parameter List Invoice 2.0

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

### Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts  
Find the “Coupa invoice Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

The screenshot shows the Netsuite interface for script deployment. The 'Script Deployment' page is open for the script 'CoupaNetSuite Invoice Integration'. The 'Parameters' tab is selected, showing a table of deployment parameters. A red arrow points to the 'Parameters' tab. The parameters table includes fields for COUPA URL, COUPA API KEY, GL ACCOUNT SEGMENT, DEPARTMENT SEGMENT, SUBSIDIARY ACCOUNT SEGMENT, CLASS SEGMENT, and LOCATION SEGMENT. The 'DEPLOYED' checkbox is checked.

COUPA URL	SUBSIDIARY ACCOUNT SEGMENT
<input type="text"/>	<input type="text"/>
COUPA API KEY	CLASS SEGMENT
<input type="text"/>	<input type="text"/>
GL ACCOUNT SEGMENT	LOCATION SEGMENT
<input type="text"/>	<input type="text"/>
DEPARTMENT SEGMENT	
<input type="text"/>	

After you are done you can click the Save button and now the Script is successfully deployed

# Netsuite to Coupa Invoice & ER Payments 2.0

## Overview

### **Invoice & Expense Payment script 1.0 is not supported, please upgrade to 2.0**

This integration syncs up Vendor Payment created in Netsuite and sends it to Coupa. Netsuite is the Payment of record and creates payment information on the Coupa Invoice. The Scheduled SuiteScript is used to capture the “create” events that will call the Coupa POST API to create the new entry.

**Bundle Release 14.0.0** - We added support for Payments created in Netsuite which only consist of Credit Notes. The new script will mark the Credit Note paid in Coupa. Integration Document has been updated with deployment parameters.

### Script Sequence Explained

This integration is on a schedule that you can set to meet your frequency and volume requirements as Payments are made in NetSuite.

- The Coupa API call to create the payment record is on a predefined schedule
- The nlapiLoadRecord(vendorpayment) function is used to read the NetSuite vendor payment record
- The nlapiRequestURL function is used to do a HTTP PUT to create the corresponding payment records in Coupa

### Activities

You will need to do the following to ensure a successful deployment of the Vendor Script

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

### Tips to help you succeed

- Ensure your currency codes in Coupa are enabled
- Understand volume and frequency of the schedule needed ahead of time to meet your business process
- The script will exclude invoice Payment created by Coupa in Netsuite for Coupa Pay Invoices.

### Pre-Requisites

- Coupa P2P & Expenses Bundle deployed
- Coupa API key or OIDC Auth created

2

**Review Parameter List**

Review parameter list and decide which ones are relevant to your company’s implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Values
<b>Static Location</b>	specify a static location internal id for the payment header, or put 'retrieveValue' which will lookup the value from the first vendor bill	custscript_coupa_pymt_headlocn	Text			
<b>Skip 404 Error</b>	Added script parameter to skip 404 error log and skip the Error email and an Audit log will be added to Execution logs	custscript_coupa_pay_skip_404_log	CheckBox			
Skip Cleared Filter	Clear status not used by some of the customers so it can be expluded	custscript_coupa_pay_skip_cleared_filter	CheckBox	Added 7.0.0		

## 1 Review Parameter List (added 14.0.0)

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*  
Script parameters

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Values
<b>Coupa URL*</b>	The Coupa instance the integration connects to	custscript_coupa_ue_cred_pay_host	Free-Form Text		https://abc.coupa host.com	

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your Values
Error Email Receiver (Comma separated)	Error recipient	custscript_coupa_ue_cred_pay_email_to	Free-Form Text			
Error Email Sender	Error email sender	custscript_coupa_ue_cred_pay_email_from	List/Record			
Account Name	Included in Error email Subject	custscript_coupa_ue_cred_pay_acc_name	Free-Form Text			

## Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts  
Find the “Coupa invoice Payment Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

The screenshot shows the 'Script Field' configuration interface in Netsuite. The form includes the following fields and options:

- Save & New** (dropdown), **Cancel**, **Reset** buttons.
- LABEL \***: Coupa URL (indicated by a red arrow).
- ID**: \_payment\_url (indicated by a red arrow).
- OWNER**: Alex Wolfe (dropdown).
- DESCRIPTION**: (empty text area).
- TYPE**: Free-Form Text (dropdown).
- LIST/RECORD**: (disabled dropdown).
- STORE VALUE**:  (checkbox).
- PREFERENCE**: (empty dropdown).

After you are done you can click the Save button and now the Script is successfully deployed

# Coupa Expense Report to Netsuite Expense Report 2.0

## Overview

**PLEASE UPGRADE YOUR VENDOR SCRIPT TO ER2ER 2.0 SCRIPT. ER2ER 1.0 script will be deprecated and will NOT be maintained from release 15.0.0 onwards.**

The integration syncs up Coupa Expense Reports and NetSuite Expense Reports via a scheduled SuiteScript. The Coupa Expense Report once “approved for payment” and not exported are ready to be imported into NetSuite. When a new Expense Report is created with status=approved for payment, the NetSuite scheduled script will call the Coupa API and will create new Expense Report. After the pull the integration will set the exported flag to true

For Expense Reports paid via CoupaPay will not set Expense Report Approved in Netsuite to avoid double payments (parameter setup required)

## Script Sequence Explained

This integration is on a schedule that you can set to meet your frequency and volume as Coupa Expense Reports are approved.

- The Coupa API call to create the Expense report is called on a predefined schedule.
- The nlapiRequestURL function is used to perform a HTTP GET to retrieve the Coupa Expense that is fully approved and not exported.
- The nlapiCreateRecord(expensereport) function is used to generate the Netsuite expense report.

## Activities

You will need to do the following to ensure a successful deployment of the Expense script.

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- The match record in NetSuite will be done on ‘Coupa ER Number’ and ‘External Id’ field. After the pull the exported flag will be set to true. .
- NetSuite Users should not update the ER in NetSuite as this could result in the updates being lost if the Coupa ER is updated after the fact.
- If NetSuite Expense Category name that maps to Coupa Expense Category is changed integration will fail to find the EC.. The change should be made in both Coupa and NetSuite at the same time.

## Pre-Requisites

1. Coupa P2P + Expenses bundle deployed
2. Coupa API key or OIDC Auth created.
3. Coupa Chart of Account setup
4. Setup coupa Users with Netsuite employee id
5. Coupa Expense Category Setup
6. NetSuite Expense Category
7. Setup (names must match identically)
8. Coupa commodity and NetSuite mapping (names must match identically)

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script parameters

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your values
Coupa URL *	The Coupa instance the integration will connect to	custscript_coupa_er_mr_host_url	freeform text			
API Filter Name	Add additional filter for the API call	custscript_coupa_er_mr_api_filter	freeform text			
Error email notification address	List of emails to receive errors generated by the script execution	custscript_coupa_er_mr_email_receiver	freeform text	Separate the emails with a comma and no space	<a href="mailto:abc1@xyz.com">abc1@xyz.com</a> , <a href="mailto:abc2@xyz.com">abc2@xyz.com</a>	
Error Email Sender	Error email sender	custscript_coupa_er_mr_email_sender	List/records			
Account Name*	As per standard, it will be company name with which environment its been setup (Test or Prod)	custscript_coupa_er_mr_account_name	freeform text	<company-name> <Test/Prod>		
T&E Account Segment	The accounting segment in Coupa that holds the Netsuite location information	custscript_coupa_er_mr_acc_seg	freeform text		Segment-5	
Department Segment	The accounting segment in Coupa that holds the Netsuite location information	custscript_coupa_er_mr_dept_seg	freeform text		Segment-2	
Location Segment	The accounting segment in Coupa that holds the Netsuite location information	custscript_coupa_er_mr_loc_seg	freeform text		segment-4	

Class Segment	The accounting segment in Coupa that holds the Netsuite classification account information	custscript_coupa_er_mr_class_seg	freeform text		segment-3	
Subsidiary Segment	The accounting segment in Coupa that holds the Netsuite subsidiary account information	_coupa_er_subsseg	freeform text		segment-1	
Export From Date	Specify Export from date	custscript_coupa_er_mr_from_er_date	Date			
Export To Date	Specify Export to Date	custscript_coupa_er_mr_to_er_date	Date			
Custom Line Field Mappings	Line custom field of coupa gets syncup with column custom field of netsuite. Note that no data transformation allowed.	custscript_coupa_er_mr_cust_line_fields	text area	<b>Supported Data Types:</b> DATE, SELECT, CHECKBOX, LOOKUP, VALUE, DEFAULT	<b>Mapping Example:</b> custom-fields.linecolor==custcol_er_line_artifact1==TEXT;segment-6==custcol_custom_project_segment==SEGMENT==customlist543;segment-3==custcol9==SEGMENT==department;custom-fields.test-line-date==custcolprepaid_start_date==DATE;custom-fields.test-line-checkbox==custcol_test_cb2==CHECKBOX;custom-fields.test-line-lookup==custcol_linejustification==LOOKUP;4==custcol_item_quantity==DEFAULT	
Custom Body Field Mappings	Header custom field of coupa gets syncup with body custom field of netsuite. Note that no data transformation allowed.	custscript_coupa_er_mr_cust_body_fields	text area	<b>Supported Data Types:</b> DATE, SELECT, CHECKBOX, LOOKUP, VALUE, DEFAULT, MULTISELECT	<b>Mapping Example:</b> payment-channel==custbody_coupa_payment_channel==TEXT;custom-fields.test-date-field==custbody23==DATE;custom-fields.header-status==custbody21==VALUE;custom-fields.test-checkbox==custbody_coupa_gl_field==CHECKBOX	

Custom Form Mapping		custscript_coupa_er_mr_custom_form	text area		<b>Format:</b> COA_ID1==FORM_ID1;COA_ID2==FORM_ID2 9==248;1==248;35==248	
Coupa Expense URL Field ID	Supports internal ID of the field to which script will set the hyperlink to the Coupa Expense Report	custscript_coupa_er_mr_url_field	Free-Form Text	Coupa Expense URL Field ID		
Custom Employee Number	Supports the coupa custom field's ID which will be used as Employee Number instead of standard employee number field	custscript_coupa_er_mr_custom_employee_num	Free-Form Text			
Posting Period Cutoff Day	Supports Positive, negative and 0 cut off day values	custscript_coupa_er_mr_cutoff_day	Free-Form Text		Supports Positive, negative and 0 cut off day values	
Set Receipt Field Value	Enable the feature to set the Receipt checkbox field on line level when receipt is attached	custscript_coupa_er_mr_set_receipt	Check Box			
Set Corporate Card Field Value	set Corporate Card Checkbox on Expense Report	custscript_coupa_er_mr_corp_card_enabled	Check Box		T or F	
Send Tax code	Option to enable tax code being sent from Coupa to Netsuite so Netsuite calculates tax. When selected tax amount will NOT be added to the vendor bill expense line amount. Also when this option is selected, there will be an additional line per expense line for header level charges	custscript_coupa_er_mr_send_tax_code	checkbox	When using this option, the taxcodes in Coupa need to be stored in the following format: netsuiteinternalid. E.g. if you have a taxcode in Netsuite VAT21 with internal id of 46 then in Coupa the taxcode should be created as VAT21:46 Additionally, this will not support Multiple Tax Lines in Coupa as there is only one place to set a Tax Code in NetSuite. Tax codes are also only applicable for NON-US Subsidiaries		

Coupa Pay	CoupaPay flag	custscript_coupa_er_coupapay	Check Box	CoupaPay is used to Pay ER		
*Use external IDs?	If customer is using external IDs for COA segments	custscript_coupa_er_mr_use_ext_id	Check box		T/F	
Set Reimbursable Field Value	enable mapping Coupa's Reimburse to Employee field with NetSuite's Non-Reimbursable field	custscript_coupa_er_mr_enable_reimburse	Check Box			
Use Accounting Review Date	Use approved at date for ER instead of created at date	custscript_coupa_er_mr_use_acc_rev_date	Check Box			
Enable T&E Feature	Enable Integration of preapproved/Travel Booking expense reports	custscript_coupa_er_mr_enable_preapp	Check Box			
Custom NS Employee Number Field		custscript_coupa_er_mrs_custom_ns_emp_number	Free-Form Text			
Force Approve The Expense Report	Force approval of ER	custscript_coupa_er_mr_force_approve_er	Check Box			
Use submitted-at field to be used as transaction date		custscript_coupa_use_submitted_at_date	Check Box		Added 15.0.0	

### 3 Review Parameter List 1.0

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script parameters

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your values
Coupa URL *	The Coupa instance the integration will connect to	_coupa_er_url	freeform text		2e528d48825a8fe5a6a2a67972a2d8d21f5j3sdf4 8	
Coupa API Key*	The API Key for Coupa's REST based API	_coupa_er_apikey	freeform text		http://netsuiteintegration-demo.coupacloud.com/	
Error email notification addresses	List of emails to receive errors generated by the script execution	_coupa_er_email_addr_notify	freeform text	Separate the emails with a comma and no space	<a href="mailto:abc1@xyz.com">abc1@xyz.com</a> , <a href="mailto:abc2@xyz.com">abc2@xyz.com</a>	
Account Name*	As per standard, it will be company name with which environment its been setup (Test or Prod)	coupa_er_accounname	freeform text	<company-name> <Test/Prod>		
Don't Import credit card expenses?	Checkbox that when enabled will force the script to skip expenses in Coupa that were created by the credit card integration.	_coupa_er_creditcardskip	checkbox	This will NOT mark them as exported currently, to allow them to be integrated through another point.		
Accounting Approval?	If true, then the expense report will have accounting approval set to true	_coupa_er_creditcardskip	checkbox			

Location Segment	The accounting segment in Coupa that holds the Netsuite location information	_coupa_er_classseg	freeform text		segment-4	
Class Segment	The accounting segment in Coupa that holds the Netsuite classification account information	_coupa_er_locseg	freeform text		segment-3	
Subsidiary Segment	The accounting segment in Coupa that holds the Netsuite subsidiary account information	_coupa_er_subseg	freeform text		segment-1	
Employee Number Field	Field on the NetSuite Employee record which holds the value matching the Coupa Employee Number field on the User record.	_coupa_er_employee_num	freeform text	By default, the script will compare the Coupa employee number to the NetSuite Employee internalid. You usually would override this if the two do not correlate, or you require the internalID to be a specific format.  This is used to match Expense reports to the correct employee.	custentity_coupa_employee_number	
Custom Body fields for expense report	Header custom field of coupa gets syncup with body custom field of netsuite. Note that no data transformation allowed.	_coupa_er_body	text area	Each custom field combination should be separated by a semicolon. The left side of the == is the field in the API response, and the right the internal id of the field in NetSuite that it maps to	requestedby==custbody_couplerequester;requested-by-email==custbody_couplerequesteremail	

Custom columns Fields	Line custom field of coupa gets syncup with column custom field of netsuite. Note that no data transformation allowed.	_coupa_er_column	text area	Each custom field combination should be separated by a semicolon. The left side of the == is the field in the API response, and the right the internal id of the field in NetSuite that it maps to	sectionname==custcol_section_name	
Send Tax code	Option to enable tax code being sent from Coupa to Netsuite so Netsuite calculates tax. When selected tax amount will NOT be added to the vendor bill expense line amount. Also when this option is selected, there will be an additional line per expense line for header level charges	_coupa_er_send_taxcode	checkbox	When using this option, the taxcodes in Coupa need to be stored in the following format: netsuitename:netsuiteinternalid. E.g. if you have a taxcode in Netsuite VAT21 with internal id of 46 then in Coupa the taxcode should be created as VAT21:46 Additionally, this will not support Multiple Tax Lines in Coupa as there is only one place to set a Tax Code in NetSuite. Tax codes are also only applicable for NON-US Subsidiaries		
Coupa Pay	CoupaPay flag	custscript_coupa_er_coupapay	Check Box	CoupaPay is used to Pay ER		
Corp Card Enable	set Corporate Card Checkbox on Expense Report	custscript_coupa_er_corporate_card	Check Box	Added 6.1.2		
Reimbursable field	enable mapping Coupa's Reimburse to Employee field with NetSuite's Non-Reimbursable field	custscript_coupa_er_enable_reimbursable	Check Box	Added 6.1.2		
Use Approved at Date	Use approved at date for ER instead of created at date	custscript_coupa_er_use_approved_at_date	Check Box	Added 8.0.0 - NIB486		
*Use external IDs?	If customer is using external IDs for COA segments	_coupa_er_extid	Checkbox		T/F	

*Custom API argument	Add custom argument to API call	_er_filter	FreeForm		&limit=20	
*Number of Record Limit	Limit ERs on API call	_exprts_limit	Freeform		10	
*Coupa Expense Report URL Link	Saves Coupa ER link to NS ER	_coupa_er_link_filtered	FreeForm			
*Use Custom Form ID	Use custom ER Transaction form ID instead of preferred/standard form ID of 46	_coupa_er_customform_id	FreeForm			

## 2 Find and Define Deployment Parameter Values

**Navigation Path:** Customization | Scripting | Scripts

Find the “Coupa Expense Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

After you are done you can click the Save button and now the script is successfully deployed. Once testing is complete, schedule the deployment called “Coupa Expense Report Scheduled”. The Adhoc deployment should be used for testing and one-off executions. The log level of the Scheduled deployment should be set to Audit.

## Coupa Expense Report Payment to Netsuite ER Payment

### Overview

The integration syncs up Coupa Expense Report Payments via CoupaPay to Netsuite via a scheduled ScuiteScript. The Coupa Expense Report Payment will be integrated when the payment is moved to “completed\_successfully” or “completed\_with\_errors” in. After the pull the integration will set the exported flag to true on the Expense Payments.

### Script Sequence Explained

This integration is on a schedule that you can set to meet your frequency and volume for Coupa Expense Payments.

- The Coupa API call to create the Expense Payment is called on a predefined schedule.
- The nlapiRequestURL function is used to perform a HTTP GET to retrieve the Coupa Expense Payment that is fully “completed\_successfully” or “completed\_with\_errors” and not exported.

### Activities

You will need to do the following to ensure a successful deployment of the Expense script.

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

### Pre-Requisites

1. Coupa P2P + Expenses bundle deployed

### Tips to help you succeed

- Map the Coupa CPA to NS Bank account correctly to avoid payment creation issues

2. Coupa API key created.
3. Coupa Chart of Account setup
4. Coupa Company Payment Account Setup for Expense Payments
5. Coupa Users Payment Method set to
6. Netsuite EFT is disabled

## Review Parameter List

Review parameter list and decide which ones are relevant to your company’s implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

# Coupa Expense Report to Netsuite Vendor Bill

## Review Parameter List

### Overview

The integration takes a Coupa Expense Report and turns it into a NetSuite Vendor bill. When a new Expense Report is created with status=approved for payment, the NetSuite scheduled script will call the Coupa API and will create Vendor Bill. After the pull the integration will set the exported flag to true.

when clients want to pay their employees in a currency other than the “functional currency” of their subsidiary. For example, if an employee resides in the Japan, and the functional subsidiary currency is set to Yen, the employee can only be reimbursed in Yen.

### Script Sequence Explained

This integration is on a schedule that you can set to meet your frequency and volume as Coupa Expense Reports are approved.

- The Coupa API call to create the Vendor Bill is called on a predefined schedule.
- The HTTP GET function is used to retrieve the Coupa Expense that is fully approved and not exported.
- The createVendorBill(expenseReport, vendorId, reportId) is used to generate the Netsuite Vendor Bill.

### Activities

You will need to do the following to ensure a successful deployment of the Expense script.

#### 1 Review Parameter List

#### 2 Find and Define Deployment Parameter Values

### Tips to help you succeed

- When an existing Expense Report that was already exported to NetSuite is updated then Coupa will set the exported flag to false.
- The NetSuite scheduled script will call the Coupa API and update the Expense Report where the “exported” flag is false and “status” is approved for payment.
- *Note: Editing the Expense Report in NetSuite is restricted. Any changes will be overridden by Coupa ER dataER*

### Pre-Requisites

1. Coupa P2P + Expenses bundle deployed
2. Coupa API key or OIDC Auth created.
3. Coupa Chart of Account setup
4. Setup coupa Users with Netsuite vendor id
5. Coupa Expense Category Setup
6. NetSuite Expense Category Setup (names must match identically)
7. Coupa commodity and NetSuite mapping (names must match identically)
8. If NetSuite Expense Category name that maps to Coupa Expense Category is changed, the integration will fail to find the Expense Category. The change should be made in both Coupa and NetSuite at the same time

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Script Definition					Script Deployment	
Label	Description	Id	Type	Comments	Example	Your values

After you are done you can click the Save button and now the script is successfully deployed. Once testing is complete, schedule the deployment called “Coupa Expense Report Scheduled”. The Adhoc deployment should be used for testing and one-off executions. The log level of the Scheduled deployment should be set to Audit.

# Coupa to Netsuite Charge to Credit Card transaction

## Overview

Customers with Coupa Pay PO Payments may use this integration. The integration takes a Coupa Charges for Purchase Orders and turns it into a NetSuite Credit Card Transactions. When a new Charge is created the NetSuite scheduled script will call the Coupa API and will create a Credit Card transaction. After the pull the integration will set the exported flag to true.

## Script Sequence Explained

This integration is on a schedule that you can set to meet your Charge data load to Coupa.

- The Coupa API call to create the Vendor Bill is called on a predefined schedule.
- The HTTP GET function is used to retrieve the new Coupa Charges for Purchase Orders.
- Script is used to generate the Netsuite credit Card Transactions.

## Activities

You will need to do the following to ensure a successful deployment of the Expense script.

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Charges will be loaded to Coupa on a daily basis, so schedule your integration daily. Align timing at implementation

## Pre-Requisites

- Coupa P2P + Coupa Pay
- Coupa API key created.
- Coupa Chart of Account setup
- Coupa Payment Partner Setup
- Coupa Supplier Payment Method setup
- Account for credit card charges in Netsuite
- Issuer Bank as Supplier in Netsuite
- Budget Periods(this is used to find Accounting Periods in NS) have to be created for that COA in Coupa

**Review Parameter List**

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

# Coupa Invoice Payment to Netsuite Vendor Bill Payment

## Overview

Customers with Coupa Pay Invoice Payments may use this integration. The integration takes a Coupa Invoice Payments and turns it into a NetSuite Vendor Bill Payments.

When an Invoice Payment is moved to “Completed Successfully” in Coupa the NetSuite scheduled script will call the Coupa API and will create a Bill Payment . The script will reverse Vendor Bill Payment and reset Payment Hold flag on invoice if the Payment status in Coupa changes to “Completed with Error”. After the pull the integration will set the exported flag to true on the Coupa Payment.

In NS Bundle release 3.0.0 we added option to

- Create one payment in Netsuite across all Invoices/Vendor bills in the Coupa Payment. This help with reconciliation and Credit Note handling in Payments. This feature requires a new parameter to be setup.
- Integrate payments as soon as they are released in Coupa to Netsuite, so no delay while the payment transition to “Completed Successfully” status. This feature requires a new parameter to be setup.

## Script Sequence Explained

This integration is on a schedule that you can set to send Payment data to Netsuite from Coupa

- The Coupa API call to create the Vendor Bill is called on a predefined schedule.
- The HTTP GET function is used to retrieve the new Coupa Invoice Payments at “completed\_successfully” status or at any status (from 3.0.0)
- Script is used to generate the Netsuite Vendor Bill Payment

## Activities

You will need to do the following to ensure a successful deployment of the Expense script.

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Payments will be pulled when moves to completed\_successfully status. Do not populate “status” parameter
- If you wish to see payment in netsuite asap, check parameters

## Pre-Requisites

- Coupa P2P + Coupa Pay
- Coupa API key or OIDC Auth created.
- Coupa Chart of Account setup
- Coupa Payment Partner (if Virtual Card on Invoice Payment used)
- Coupa Company Payment Account(s)
- Coupa Supplier Payment Method setup
- Coupa Supplier Payment Account(s)

## Review Parameter List

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

<b>Static Classification</b>	specify a static classification internal id for the payment header, or put 'retrieveValue' which will lookup the value from the first vendor bill	custscript_coupa_pymt_headclas	Text			

## 2 Find and Define Deployment Parameter Values

Navigation Path: Customization | Scripting | Scripts  
 Find the “CoupaPay Payment Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

The screenshot shows the Oracle Netsuite interface for configuring the 'CoupaPay Payments Integration' script. The 'Parameters' tab is selected, displaying a list of configuration options:

- COUPA URL
- COUPA API KEY
- ERROR EMAILS FROM
- ERROR EMAILS TO
- PAY ACCOUNT MAPPING
- PAYMENT EXPORT STATUS

Other visible parameters include: ID (customdeploy1), DEPLOYED (checked), STATUS PAGE, LOG LEVEL (Debug), EXECUTE AS ROLE (Administrator), PRIORITY (Standard), CONCURRENCY LIMIT (1), SUBMIT ALL STAGES AT ONCE (checked), YIELD AFTER MINUTES (60), and BUFFER SIZE (1).

# Coupa Treasury Payment to Netsuite GL

## Overview

Customers with Coupa Pay Treasury Payments may use this integration. The integration takes a Coupa Treasury Payments and turns it into a NetSuite GL.

## Script Sequence Explained

This integration runs on a schedule basis and will send Coupa Pay Treasury Payment data to Netsuite as General Ledger entries.

- Calling Coupa API to get Treasury Payments on a predefined schedule.
- The HTTP GET function is used to retrieve the Coupa Treasury Payments at “completed\_successfully” status by default
- Script is used to generate the Netsuite intercompany GL entries

## Activities

You will need to do the following to ensure a successful deployment of the Expense script.

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Payments will be pulled when moves to completed\_successfully status. Do not populate “status” parameter

## Pre-Requisites

- Coupa Treasury Bundle installed or P2P Bundle+TreasuryPayment script setup
- Coupa OIDC Auth created.
- Coupa GL Account setup

**Review Parameter List**

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

# Coupa to Netsuite Expense Payment to Vendor Bill Payment

## Overview

Customers with Coupa Pay Expense Payments may use this integration. The integration takes a Coupa Invoice Payments and turns it into a NetSuite Vendor Bill Payments.

When an Expense Payment is moved to “Completed Successfully” in Coupa the NetSuite scheduled script will call the Coupa API and will create a Bill Payment . The script will reverse Vendor Bill Payment and reset Payment Hold flag on Vendor Bill if the Payment status in Coupa changes to “Completed with Error”. After the pull, the integration will set the exported flag to true on the Coupa Expense Payment.

- Create one payment in Netsuite across all Invoices/Vendor bills in the Coupa Expense Payment.
- Integrate Expense payments as soon as they are released in Coupa to Netsuite, so no delay while the payment transition to “Completed Successfully” status. This feature requires a new parameter to be setup.

## Script Sequence Explained

This integration is on a schedule that you can set to send Payment data to Netsuite from Coupa .

- The Coupa API call to create the Vendor Bill is called on a predefined schedule.
- The HTTP GET function is used to retrieve the new Coupa Expense Payments at “completed\_successfully” status or at any status
- Script is used to generate the Netsuite Vendor Bill Payment

## Activities

You will need to do the following to ensure a successful deployment of the Expense script.

- 1 Review Parameter List**
- 2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Payments will be pulled when moves to completed\_successfully status. Do not populate “status” parameter
- If you wish to see payment in netsuite asap, check parameters

## Pre-Requisites

- Coupa Expense + Coupa Pay
- Coupa API key or OIDC Auth created.
- Coupa Chart of Account setup
- Coupa Company Payment Account(s)
- Coupa Employee Payment Method setup
- Coupa Employee Payment Account(s)

## Review Parameter List

Review parameter list and decide which ones are relevant to your company’s implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

Override released_at	Override usage of released_at date to use update_at date for payment	custscript_coupa_er2v bpay_use_updated_at	CheckBox	Added 7.0.0		

## 2 Find and Define Deployment Parameter Values

Navigation Path: Customization | Scripting | Scripts

Find the “CoupaPay Payment Integration” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

After you are done you can click the Save button and now the script is successfully deployed. Once testing is complete, schedule the deployment called “CoupaPay ER2VB Payment Integration Scheduled”. The Adhoc deployment should be used for testing and one-off executions. The log level of the Scheduled deployment should be set to Audit.

# Coupa PrePayment to Netsuite PrePayment

## Overview

Pre-Payment (milestone) can be created on Coupa Purchase Orders for non CoupaPay Suppliers.

Once Purchase Order is approved Pre-Payments will be integrated to Netsuite.

PrePayments must be paid in Netsuite. Integration will bring Pre-Payment “paid” status back to Coupa which allows the Pre-Payment to be allocated to an Invoice.

Pre-Payment allocation in Coupa will be integrated to Netsuite creating a Pre-Payment Allocation.

When Coupa Invoice integrated to Netsuite, it will have the relevant Pre-Payment linked through the Pre-Payment Allocation which will reduce automatically the Invoice Payment due amount in Netsuite.

## Script Sequence Explained

This integration is on a schedule that you can set to send Pre-Payment and Pre-Payment Allocation data to Netsuite from Coupa and send Pre-Payment payment status from Netsuite to Coupa

This Integration involves 3 scripts.

## Activities

You will need to do the following to ensure a successful deployment of the Expense script.

**1 Review Parameter List**

**2 Find and Define Deployment Parameter Values**

## Tips to help you succeed

- Make sure Pre-Payment approval is set in NS (or set to auto approve)
- Scripts are schedules correctly and running frequently

## Pre-Requisites

- Coupa P2P + Coupa Pay
- Coupa API key or OIDC Auth created.
- Script deployment parameter is set
- Coupa/Netsuite Segment mapping is setup correctly
-

## Review Parameter List

Review parameter list and decide which ones are relevant to your company's implementation of Coupa. Please note the fields that are mandatory are noted with an asterisk \*

- Coupa PrePaymentReconciliation Line Sync SCRIPT – MAP/REDUCE
- Coupa Prepayment Application to VB Script is a User Event script, no Parameter required

# Coupa Dynamic Discounting to Netsuite Invoice

## Overview

Customers with CoupaPay Dynamic Discounting may use this integration. The integration checks CoupaPay Invoice status and makes the necessary updates to the Netsuite Bill to reflect the Early Payment Discount process.

When a Supplier invoice in Coupa is eligible for Working Capital Consideration the integration will put the Bill in Netsuite on “Hold Payment”, so it can not be included in the payment run while the Early Pay Discount (EPD) process is on. When the EPD is accepted or the EPD has expired, based on the Coupa PayInvoice, integration will remove NS Bill “Hold Payment” flag, and will apply the Payment Term applicable based on the EPD.

The script will create NS Payment term with prefix as “\_DD\_Terms\_Percentage%\_DueDays”

- Supplier Invoice in Coupa is under Working Capital Consideration
- Integration sets NS Bill/invoice “Hold Payment” flag
- Inetgration removes NS Bill/Invoice. “Hold Payment” flag. And applies EPD Payment Term

## Script Sequence Explained

This integration is on a schedule that you can set to send Dynamic Discounting data to Netsuite from Coupa .

- The Coupa API call to update the Vendor Bill is called on a predefined schedule.
- The HTTP GET function is used to retrieve the CoupaPay Invoice status

## Activities

You will need to do the following to ensure a successful deployment of the Dynamic Discounting script.

- 1 **Review Parameter List**
- 2 **Find and Define Deployment Parameter Values**

## Tips to help you succeed

- CoupaPay Invoice in. Working Capital Consideration
- New Payment Terms created automatically

## Pre-Requisites

- Coupa API key or OIDC Auth created.
- Coupa Chart of Account setup
- Coupa Company Payment Account(s)
- Supplier Working Capital Whitelisted in Coupa

## 1 Review Parameter List

Review parameter list and decide which ones are relevant to your company’s implementation of Coupa.

Please note the fields that are mandatory are noted with an asterisk \*

Coupa API Key	custscript_coupa_chrg_apikey	custscript_coupa_dd_api_key	Freeform text		102983oiIJ092831237772310	

## 2 Find and Define Deployment Parameter Values

Navigation Path: Customization | Scripting | Scripts  
Find the “CoupaPay Dynamic Discounting” script

Now you can click the Parameter menu item and start entering your specific values, please note your specific parameter values may vary based on your Coupa implementation.

Please refer back to the parameters table for guidance.

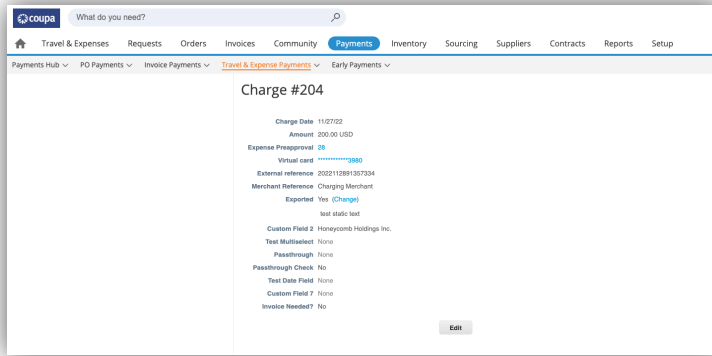

After you are done you can click the Save button and now the script is successfully deployed. Once testing is complete, schedule the deployment called “CoupaPay Dynamic Discounting”. The Adhoc deployment should be used for testing and one-off executions. The log level of the Scheduled deployment should be set to Audit.

## Expense PreApproval Process

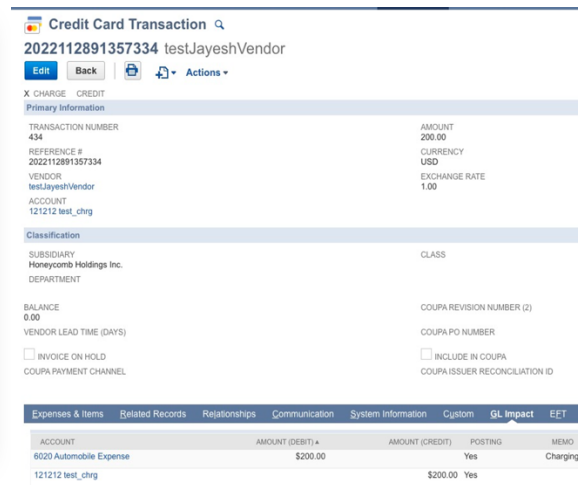

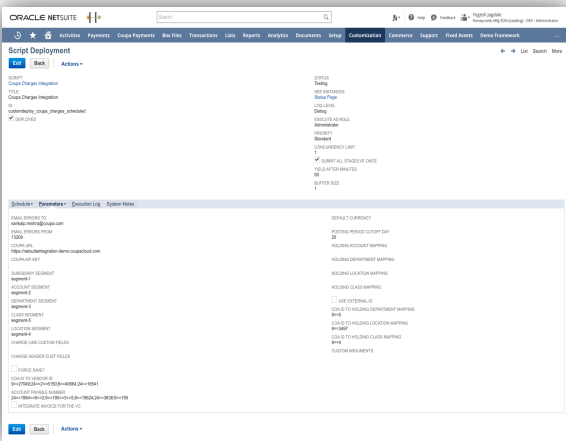

Expense PreApproval (with Virtual Card) is supported from NS Bundle 11.0.0.

The process starts with an Expense PreApproval request. Once the Request is approved, the User will be provided with a Virtual Card. The Coupa Steps are not described here.

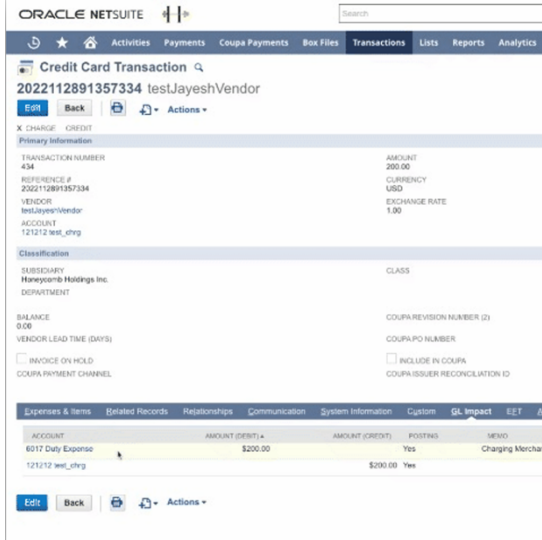

1. As soon the Virtual Card is used and charge has flown into Coupa from the card network, NS Bundle will integrate the Coupa virtual card **Charges** to Netsuite as Netsuite **Credit Card** transaction.

2. At that point the Credit Card transaction will be booked against the holding account (in this example 6020) defined in Coupa as no final debit account yet available.

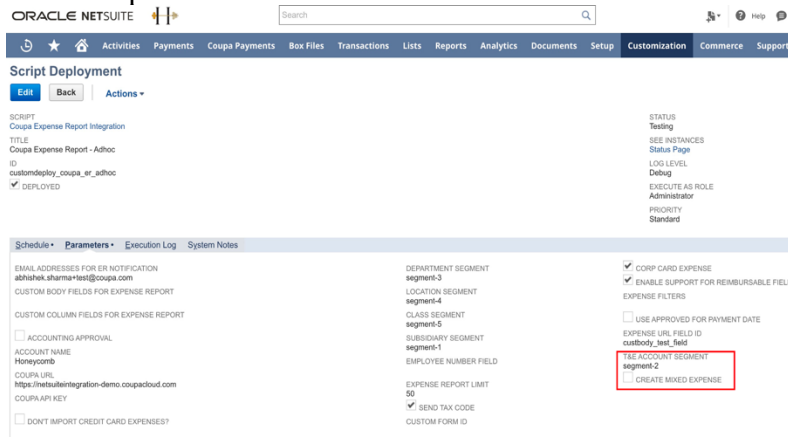

3. Once Expense Report is approved for this PreApproved spend, the ER2ER integration will run and update the Credit Card transaction in Netsuite with the final Account (in this example 6017)
4. Netsuite Credit Card transaction will have the reference to the Coupa Expense Report and User. In Coupa there will be a link to the Netsuite Credit Card transaction for auditability.

### NS Bundle Integration Options:

1. Expense Reports only contain PreApproval Expense Lines.
  - a. NS Bundle will not create a Netsuite Expense Reports for these Coupa PreApproval Expense reports.
  - b. Credit Card transaction will get updated with final debit account from approved Expense report
  - c. If Expense Report has mixed lines, NS bundle will throw an error.
2. Expense Report contains mixed lines (PreApproval, Corp card lines, Expense lines)
  - a. NS Bundle will not a Netsuite Expense Reports for all Expense Report Lines except the Coupa PreApproval Expense Line(s).
  - b. Create Mixed Expense Line checkbox must be marked on ER2ER script deployment

## Open T&E CC Transaction

As Expense Reports are submitted and approved usually late or even in next financial period, Credit Card transaction must be in an open period, so NS Bundle can update final debit account when Expense Report is approved.

To help simplify/automate moving these outstanding Credit Card transaction to the next period, we created a suitelet.

1. Navigate to Coupa Menu >> Open T&E CC Transaction >> T&E CC transaction Processing

- 2.

The screenshot shows the 'Credit Card Transaction' page in Coupa. The transaction ID is 2022112891357334. The primary information includes: Transaction Number 434, Amount 200.00, Date 11/27/2022, Reference # 2022112891357334, Currency USD, Posting Period Nov 2022, Vendor testJayeshVendor, and Account 121212 test\_cyrg. The classification shows the subsidiary as Manpower Holdings Inc. and the department as TESTING CUSTOM SEGMENT. The balance is 0.00. The page also includes a table for 'Expenses' with columns for Account, Amount, Memo, Location, Customer, Invoice, and Expense Attachments.

3. The report will list all Credit Card transaction for Expense PreApproval which is still sitting on a Holding Account (Expense Report not yet been approved, and final account not yet set)

The screenshot shows the 'Open T&E CC Transactions' report. The 'Invoice To Period' is set to 'FY 2022 - Q4 2022 - Nov 2022'. The table below lists transactions with the following columns: Apply, Internal ID, Date, Document Number, Vendor, Account, Memo, Posting Period, and Amount. The transactions listed include IDs such as 597656, 596256, 596257, 596557, 596657, 596957, 596957, 600257, 600157, 600158, 600159, 600257, 600258, 600259, and 600260.

4. Select the period where you want to move the outstanding Credit Card transactions, then hit Submit

Note, this process can be automated fully as the background script can be set to run last day of the month and move all open Credit Card transactions for PreApproval to the next open period.
