

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
15.0.0	2024-04-22	R39	2024.1	<p>SIM Script:</p> <ul style="list-style-type: none"> • NIB-855 – Added a logic to skip the bank record mapping if the Remit To Address (RTA) is inactive. Script adds an entry to the logs of this action. • NIB-557 – Added support for multiple bank file format on SIM RTA custom field to support geo expansion for customers. • NIB-852 – Added support to store tax number correctly for non US subsidiary vendors on “vatregnumber” field. Previously vendors tax number was stored on “taxidnum” field which was relevant for US Subsidiary vendors only. <p>Vendor Script:</p> <ul style="list-style-type: none"> • NIB-828 – Added support for custom field mapping on Remit To Address (RTA) level <p>CoupaPay Payments Script:</p> <ul style="list-style-type: none"> • NIB-43 – We added a fix to skip payment processing if the payment contains a credit note which does not exist in NS to prevent an integration failure. The script jumps to the next payment to process and will try to integrate next time when the credit note should already be in NS. <p>ER2ER Script:</p> <ul style="list-style-type: none"> • NIB-867 - Added mapping for expenseDate field on expense-line level to replicate functionality from 1.0 script. New parameter added. • NIB-864 – Fixed ER header level currency field mapping to “expensereportcurrency” • NIB-847 – Added support to use the submitted-at over the standard approved-at date/time for payment status date. <p>ER2VB Script:</p> <ul style="list-style-type: none"> • NIB-867 – Added support to use the updated-at as the transaction date during integration. This has been added to match the ER2ER functionality.
14.1.1	2024-03-04	R38	2024.1	<p>Invoice 2.0 Script:</p> <ul style="list-style-type: none"> • Fixed a script syntax issue introduced in 14.1.0 triggering alert at execution <p>CoupaPay ER2ER Payments Script:</p> <ul style="list-style-type: none"> • Fixed a script syntax issue introduced in 14.1.0 triggering alert at execution
14.1.0	2024-03-01	R38	2024.1	<p>Invoice 2.0 Script:</p> <ul style="list-style-type: none"> ▪ NIB-829 – Optimized the Invoice script to handle 300+ invoice lines to avoid usage limit exceed error. <p>CoupaPay ER2ER Payments Script:</p> <ul style="list-style-type: none"> • NIB-839 – Fixed an issue for false integration “undefined variable” error notification being sent out on Map step.

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
14.0.2	2024-01-08	R38	2023.2	<p>COA 2.0 Script:</p> <ul style="list-style-type: none"> • NIB-624 – Fixed an issue for parent and child lookup values wouldn't be listed under the same segment causing integration issues. Reverting the behaviour to 1.0 script's behaviour where only the name of the lookup value will contain hierarchy and no parent value will be set unless explicitly parent field id is not set on the parameter.
14.0.0	2023-12-04	R38	2023.2	<p>Netsuite Bundle script Vendor 1.0, Invoice 1.0 are NOT supported going forward as previously communicated. Please upgrade to 2.0 script now!</p> <p>COA 2.0 Script:</p> <ul style="list-style-type: none"> • NIB-613 – New Script. New User Event Script with backend Netsuite suitlet has been created. Integration Document updated with new parameters. All COA script 1.0 functionalities are supported. COA script 1.0 will be decommissioned and not supported from Netsuite Bundle version 16.0.0. Please upgrade to the new COA script 2.0 as soon as possible. <p>Vendor Script:</p> <ul style="list-style-type: none"> • NIB-818 – Fixed an issue when Vendor record “external_ref_num” field was set to empty in Netsuite, but failed to integrate to Coupa and thrown an error message. This was particularly an issue when user tried to clear/empty “external_ref_num” in NS on Vendor record. <p>Exchange Rate 2.0 Script:</p> <ul style="list-style-type: none"> • NIB-813 – Fixed multiple false error email being triggered. <p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> • NIB-466– New Script. We added support for Payments created in Netsuite which only consist of Credit Notes. The new script will mark the Credit note paid in Coupa also. Integration Document has been updated with deployment parameters. <p>CoupaPay Payments Script:</p> <ul style="list-style-type: none"> • NIB-820 – Fix an issue for error “THIS_TRANSACTION_HAS_ALREADY_BEEN_VOIDED” in Netsuite. We have added additional validation to avoid posting already voided payments to Netsuite. <p>CoupaPay ER2ER Payments Script:</p> <ul style="list-style-type: none"> • NIB-802 – Fixed an issue where error emails were not getting triggered if the ER was not approved so the ER was not available to create payments against.

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
13.1.0	2023-10-13	R37	2023.2	<p>Vendor Script:</p> <ul style="list-style-type: none"> • NIB-794 – Added support for header level nested multi level custom field mapping <ul style="list-style-type: none"> ○ Example: <ul style="list-style-type: none"> ▪ 'custom-fields.subsidiary==custentity_org_type==LOOKUP' ▪ 'custom-fields.invoice-needed==custentityallow_invoicing_from_csn==CHECKBOX' ▪ 'dd-account-number==custentity_paymt_method==VALUE' ▪ 'supplier-legal-name==TEST==DEFAULT' ▪ 'custom-fields.coupa-subsidiary==custentity_custom_multi_select==MULTISELECT' ▪ 'custom-date==custentity_custom_date==DATE' ▪ 'custom-fields.test.sss_assigned.login==custentity_coupa_supplier_id==Value' (multi-level mapping) ▪ 'test.node.sss_assigned.login==custentity_coupa_supplier_id==Value' (multi-level mapping) • NIB-807 – Fixed a bug where content group was cleared in Coupa if no content group was provided on deployment parameters • NIB-793 (Vendor Update Script) – Fixed issue when “include in Coupa” checkbox got unchecked but Vendor did not get deactivated in Coupa. • NIB-806 Vendor Update Script) – Fixed an issue when the Supplier ID was not saved on the Vendor record causing new Vendor record creation <p>SIM Script:</p> <ul style="list-style-type: none"> • NIB-786 – Fixed an integration error being thrown issue caused by incorrect payload shared between Coupa and Netsuite when no object to integrate. <p>Prepayment script:</p> <ul style="list-style-type: none"> • NIB-789 – Fix the currency mapping to pick the foreign amount if the prepayment was in a different currency than the subsidiary default currency. • NIB-809 – Fixed a logging issue when Invoice could not be found for the prepayment. <p>Invoice 2.0 Script:</p> <ul style="list-style-type: none"> ▪ NIB-796 – Fixed an issue Invoice failing to integrate to Netsuite when header charges (Shipping/Misc/Handling) are disabled and send Tax Code enabled on script deployment. <p>ER2VB Script:</p> <ul style="list-style-type: none"> • NIB-781 – Added support for custom argument on script deployment • NIB-660 – Suppressed false positive error log when ER marked exported by the script <p>ER2ER Script:</p> <ul style="list-style-type: none"> • NIB-808 – Added support to skip integration for Corporate Card ERs to Netsuite. “Skip CC Expense Reports” deployment checkbox added. In case of ER with mixed ER lines, only the non corporate card (non reimbursable) ER line will get integrated to Netsuite. Log will indicate that corporate card ER line is skipped. • NIB-791 – Fixed an issue where corporate card ER is created have been set incorrectly to reimbursable in case on the deployment “corporate card Field value” and “Set Reimbursable Field Value” were enabled at the same time. • NIB-800 – Added support to set Account Payable account through default custom field mapping (e.g. 337=TESTACCOUNT=DEFAULT) <p>CoupaPay ER2ER Payments Script:</p> <ul style="list-style-type: none"> • NIB-674 – Fixed an issue where ER Payment integration was blocked for all ERs if in Netsuite one ER was in pending approval status. The fix checks if there is already a Payment made in Coupa for the ER and only then it integrates the ER Payment

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
13.0.0	2023-08-14	R37	2023.2	<p>CoupaPay Charges:</p> <ul style="list-style-type: none"> • NIB-771 – Extended the customer mapping to support all data types (Date, multiselect, checkbox, text, defaulting) <p>CoupaPay Payments Script:</p> <ul style="list-style-type: none"> • NIB-771 – Extended the customer mapping to support all data types (Date, multiselect, checkbox, text, defaulting) <p>CoupaPay Expense Report to Vendor Bill Payments</p> <ul style="list-style-type: none"> • NIB-771– Extended the customer mapping to support all data types (Date, multiselect, checkbox, text, defaulting) <p>CoupaPay Expense Report to Expense Report Payments</p> <ul style="list-style-type: none"> • NIB-771– Extended the customer mapping to support all data types (Date, multiselect, checkbox, text, defaulting) <p>CoupaPay Expense Report to Vendor Bill Payments</p> <ul style="list-style-type: none"> • NIB-771– Extended the customer mapping to support all data types (Date, multiselect, checkbox, text, defaulting) <p>Vendor Integration 1.0 & 2.0</p> <ul style="list-style-type: none"> • NIB 785- New script Vendor 2.0 map reduce script has been created. Integration Document updated with new parameters. All Vendor script 1.0 functionalities are supported. Vendor script 1.0 will be supported until Netsuite Bundle version 15.0.0. Please upgrade to the new Vendor script 2.0 as soon as possible. • NIB 778 - Extended the custom mapping to support all data types (Date, multiselect, checkbox, text, defaulting) <p>ER2ER</p> <ul style="list-style-type: none"> • NIB 611- New script ER2ER 2.0 map reduce script has been created. Integration Document updated with new parameters. All ER2ER script 1.0 functionalities are supported. ER2ER script 1.0 will be supported until Netsuite Bundle version 15.0.0. Please upgrade to the new Vendor script 2.0 as soon as possible.

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
12.1.0	2023-06-23	R36	2023.1	<p>SIM Script</p> <ul style="list-style-type: none"> • NIB 647 – New checkbox parameter added to pass customer API arguments on deployment. New parameter added as “custscript_coupa_sim_api_filter” • NIB 759 – New checkbox parameter added to set the Tax Registration Number instead of federal tax id as the Tax ID on the Vendor record. New parameter added as “custscript_coupa_sim_use_tax_reg_num” • NIB 758 – Added support to send error email notification when there is an error in the bank details. <p>Vendor Integration</p> <ul style="list-style-type: none"> • NIB 766 - New checkbox parameter added to enable the feature to sync NetSuite subsidiaries on the vendor record in to the COA field on Supplier record in Coupa (Subsidiary Name must match the COA name in Coupa). New parameter added as “custscript_vendor_sync_account_types” • NIB 753 – Added support for more than 2 levels in Custom Field mapping (for User and other complex types, like custom-fields/sss_assigned/login:custentity_coupa_supplier_id:Value:Value) • NIB 767 – Added a fix to prevent overwriting externalid if externalid populated from another id not tied to Coupa • NIB 754 - Some customers set PO Method value on the vendor record using SIM form where they set text value in the freeform field. The script expects a dropdown for PO Method and uses getFieldText to get the label of the option. This results in an error when the field is a freeform text field as NS expects the getFieldValue API to retrieve the value. <p>ER2VB Script</p> <ul style="list-style-type: none"> • NIB 751 - New checkbox parameter added to enable skip all corp card expense reports. New parameter added as custscript_coupa_er2vb_skip_corpcard_exp <p>Prepayment script:</p> <ul style="list-style-type: none"> • NIB-731 – Added support to only sync the prepayment back to Coupa when PFA record is attached in case EFT is enabled on prepayments. 2 new parameters added : <ul style="list-style-type: none"> ○ ‘custscript_coupa_prepay_sync_eft_field’ must contain the internal id of the "FOR ELECTRONIC BANK PAYMENT" field on the Vendor Prepayment transaction (example custbody_9997_is_for_ep_eft) ○ ‘custscript_coupa_prepay_sync_pfa_field’ must contain the internal id of the "PFA RECORD" field on the Vendor Prepayment transaction (example mappong custbody_9997_pfa_record) <p>General:</p> <ul style="list-style-type: none"> • NIB 742 – Added support defaulting Boolean (true/false) value at header and line level for custom fields <ul style="list-style-type: none"> ○ Supported formats <ul style="list-style-type: none"> ▪ t==custcol_test_cb==DEFAULT ▪ true==custcol_test_cb==DEFAULT ▪ T==custcol_test_cb==DEFAULT ▪ True==custcol_test_cb==DEFAULT ▪ TRUE==custcol_test_cb==DEFAULT ▪ f==custcol_test_cb==DEFAULT ▪ false==custcol_test_cb==DEFAULT ▪ F==custcol_test_cb==DEFAULT ▪ False==custcol_test_cb==DEFAULT ▪ FALSE==custcol_test_cb==DEFAULT

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
12.0.0	2023-04-24	R36	2023.1	<p>Treasury Payment script</p> <ul style="list-style-type: none"> NIB 696 – New Feature - new script created to move Fund Transfer Payments from Coupa to Netsuite as intercompany GL entries. <p>CoupaPay Payments Script:</p> <ul style="list-style-type: none"> NIB-730 – Added a fix to resolve cross border payment exchange rate when involves 4 tuple mapping used. Script will skip setting exchange rate for this case <p>Invoice Script 2.0</p> <ul style="list-style-type: none"> NIB 743 – Added logic if no AP account provided on deployment allow NS to set default account <p>COA Script:</p> <ul style="list-style-type: none"> NIB-739 – Added support for Non World Netsuite to set to lookup name value using the parameter custscript_coupa_accs_namefield
11.1.1	2023-03-31	R35	2023.1	<p>ER2ER report script:</p> <ul style="list-style-type: none"> NIB 735 - Added support for Travel Booking with Virtual Card Expense Report to be integrated to Netsuite as Expense Report (and Charges) <p>ER2VB report script:</p> <ul style="list-style-type: none"> NIB-735 - Added support for Travel Booking with Virtual Card Expense Report to be integrated to Netsuite as Vendor Bill (and Charges) <p>CoupaPay Charges:</p> <ul style="list-style-type: none"> NIB-735 – Added mapping location, department and class from ER to Charges
11.1.0	2023-03-17	R35	2023.1	<p>ER2ER report script:</p> <ul style="list-style-type: none"> NIB 659 - Added support for the preapproved expenses getting created with PAID status and mixed preapproved expenses were getting created with APPROVED FOR PAYMENT status. NIB 722 - Fixed an issue where expense reports created in NS with incorrect exchange rate and foreign amount NIB 685 - Added support for universal date format to the ER2ER script <p>ER2VB report script:</p> <ul style="list-style-type: none"> NIB-659 - Added support for the preapproved expenses getting created with PAID status and mixed preapproved expenses were getting created with APPROVED FOR PAYMENT status. <p>Invoice Script 2.0</p> <ul style="list-style-type: none"> NIB 727 - Improved the search for posting period in case of negative cut-off day NIB 677 - New Feature to add taxes on new line when send taxcode is set to True and taxes are entered in the format of rate and amount. New Shipping Charge Account, Handling Charge Account, Misc Charge Account and Invoice Tax Account script parameters added to provide flexibility in choosing separate account for charges on the Vendor bill <p>SIM script:</p> <ul style="list-style-type: none"> NIB-673 - Minor update in the audit log

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
11.0.0	2022-12-06	R35	2022.2	<p>Prepayment script: NEW SCRIPT</p> <ul style="list-style-type: none"> NIB-517 – New Feature to support Purchase Order PrePayments (milestones). Feature involves 3 new scripts and modification to the Invoice Script. Please check Integration Documentation for all the details <p>ER2ER report script:</p> <ul style="list-style-type: none"> NIB-659 & NIB-683 – New Feature to support Expense PreApproval (VirtualCard). Feature involves change to the Charge Script, ER2ER script and a new suitelet to support moving outstanding Netsuite Credit Card Transactions to next period. Please check Integration Documentation for all the details <p>SIM script:</p> <ul style="list-style-type: none"> NIB-673 - fixed an issue creating Vendors with Australian phone number NIB-626 – new feature supporting one to many customer field mapping using split logic. Argument format: PAYMENT_FILE_FORMAT_ID==COUPA_FIELD_ID==NS_FIELD_N_ID NS_FIELD_N+1_ID==INITIAL_INDEX, LAST_INDEX Example: 24==bank-account-number==custrecord_2663_entity_bank_no custrecord_2663_entity_branch_no==0,4,8; <p>Invoice Script</p> <ul style="list-style-type: none"> NIB-668 – Fixed an issue for custom field mapping failure for integer mapping

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
10.1.0	2022-10-13	R34	2022.2	<p>Invoice Script 2.0:</p> <ul style="list-style-type: none"> • NIB-654 – Fixed an issue where Invoices with Payment-Channel “Coupa Pay – Virtual card” got integrated for Virtual Card on PO use case when “SKIP BILL FOR VC N PO” parameter was checked. Fix will ensure these invoices will be marked exported when “SKIP BILL FOR VC N PO” is enabled. • NIB-640 – Added logic to skip Credit Note to integrate if Credit Note line has negative sign and Tax Rate/Amount of 0 to avoid inconsistent sign error. Error is logged. • NIB-632 – Added a logic to trim whitespaces of values for custom field mapping (TEXT type or no type defined) before setting them on the NS record <p>ER2VB Script:</p> <ul style="list-style-type: none"> • NIB-603 – Added support to search COA segment by external id • NIB-662 – Fixed an issue for ‘Updated After’ date condition. Customers may experienced ER were pulled even before Updated After date set. <p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> • NIB-648 – Fixed an issue to fully support OIDC headers on API call for Payment 2.0 script • NIB-635 – Added a fix to skip searching foreign amount for credit note for non multi-currency accounts. Customer may have experienced “appliedtoforeignamount” error despite “do not have multiple currencies” enabled <p>CoupaPay Payments Script:</p> <ul style="list-style-type: none"> • NIB-616 & NIB-638 – Updated the Payment Script to use the global functions available. Support functions include: <ul style="list-style-type: none"> ○ posting period cut of days (new parameter fielded: custscript_coupa_pymt_cutoff & custscript_coupa_erpymt_cutoff) ○ Coupa date to NS date transformation based on Company Preferences in NS ○ NS OneWorld Paramter check ○ NS Multi Currency check ○ Instance URL check to determin prod/sandbox ○ Set payment approved in NS only when approval is enabled in NS <p>CoupaPay Expense Report to Vendor Bill Payments</p> <ul style="list-style-type: none"> • NIB-637– Updated the Payment Script to use the global functions available. Support functions include: <ul style="list-style-type: none"> ○ posting period cut of days (new parameter fielded: custscript_coupa_er2vbpay_cutoff) ○ Coupa date to NS date transformation based on Company Preferences in NS ○ NS OneWorld Paramter check ○ NS Multi Currency check ○ Instance URL check to determin prod/sandbox ○ Set payment approved in NS only when approval is enabled in NS

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
10.0.0	2022-08-22	R34	2022.2	<p>Vendor Script:</p> <ul style="list-style-type: none"> NIB-492 - Fixed an integration issue where Vendor PO email address in Netsuite contains special character. Integration will support special character on all Vendor record email fields. <p>COA Script:</p> <ul style="list-style-type: none"> NIB-538 – Fixed an issue causing integration error when lookup prefix does not populate when using script with “One Subsidiary” settings. <p>Invoice Script 2.0:</p> <ul style="list-style-type: none"> NIB-597 – New Feature: New Custom Form mapping has been introduced to support different form for Invoice/Bill and Credit Notes. New mapping has been introduced as “COA_ID==FORM_ID==VB” or “COA_ID==FORM_ID==CN”. Mapping applied in order. (examples: 9==153==VB; 9==155==CN; 9==153) NIB-597 – New Feature: Adding support for default field mapping in Invoice 2.0 script also. New mapping has been introduced as “Value==custcol_coupa_er_desc==DEFAULT” (example: “3==custbody_test_sub_lookup==DEFAULT”; “TEST==custbody_requested_by==DEFAULT”) NIB-599 – Fixed: an issue when Credit Note is applied to a vendor bill using the credit button in Netsuite on the vendor bill record, the saved search returns duplicate results. NIB-540 - Fixed: an issue when Vendor Bill duplication error received during integration and script incorrectly set the hold flag for Vendor Bills in Netsuite. Additional checks have been added to avoid duplication errors <ul style="list-style-type: none"> Skip invoice integration if vendor bill with same Document Number exists in NS created through Netsuite UI Integrate Invoice if Vendor Bill with same Document Number exists in NS created through Coupa script(verified based on External id of the vendor bill) in rejected status. NIB-609 – Fixed: an issue where Supplier Number in Coupa is empty causing the script to return any Vendor Bill (regardless of vendor) with the same document number. Added additional logic to stop integrating these Invoices to avoid issues. NIB-493 & NIB-502 - Fixed: Order of invoice processing did not allow for integration to void a Bill and integrate its identically number replacement in the same integration run. By changing the order of processing Voided Invoices first from Coupa then all other Invoices. <p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> NIB-574 – New Feature: When Credit Notes applied to an Bill in Netsuite and payment is sent to Coupa for these Bills/Credit notes, with this feature we set the Credit note applied in Coupa. <p>ER2VB Script:</p> <ul style="list-style-type: none"> NIB-630 – Updated the script to use the common library for shared functions (posting period, date transformation, Netsuite One World check, Netsuite multiple currency check, prod/sandbox Netsuite instance check)

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
10.0.0	2022-08-22	R34	2022.2	<p>ER2ER report:</p> <ul style="list-style-type: none"> • NIB-577 – Fixed: an issue where empty custom fields generated an integration error. Script will skip setting of custom field value if the custom -field value if in Coupa the field is blank or null <p>CoupaPay Invoice Payments Script:</p> <ul style="list-style-type: none"> • NIB-607 – Fixed an integration error where we try to post Vendor Payment to Netsuite when Vendor Bill is not yet integrated to Netsuite. Script will not integrate Vendor payments until Vendor Bill is not integrated to Netsuite. As a result integration error will not present in logs, but script will still raise a warning. • NIB-604 – Fixed and issue where rejected payment batch was resubmitted causing integrations issues. Script has been changed to ignore voided payment lines. <p>CoupaPay Charges:</p> <ul style="list-style-type: none"> • NIB-615 – Updated the script to use the common library for shared functions (posting period, date transformation, Netsuite One World check, Netsuite multiple currency check, prod/sandbox Netsuite instance check)

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
9.1.0	2022-06-30	R33	2022.1	<p>Invoice Script 2.0:</p> <ul style="list-style-type: none"> • NIB-588 – Fixed: Resolved a problem where environmental validation was not triggered in certain cases. The modifications implemented, will validate the NS instance, by validating the Coupa URL present in the deployment with the environment. • NIB-550 – Enhanced: The logic of the positive cut-off period has been updated with new conditions to handle invoices over 2 months. • NIB-572 – Fixed: Resolved an issue where the custom field mapping for SEGMENT previously wasn't supporting external id based searching • NIB-580 – Fixed: Resolved an issue where Incorrect internal id was used for searching class when external id based search is enabled in script deployment • NIB-561 – Fixed: Resolved an issue that prevented users from using external ID based search for the class segment • NIB-569 – Fixed: Resolved an issue that prevented correct tax calculation for customers with Avatax bundle installed • NIB-570 – Fixed: Resolved an issue where \$0 charges lines were getting added to the vendor bill created even though the invoice didn't have any charges added. The condition only triggered when "send tax code" was enabled in script deployment and invoice had split billing. • NIB-560 – Fixed: Resolved an issue that prevented the voided invoices from coupa to mark the vendor bills as rejected • NIB-585 – Fixed: Resolved an issue that caused a total mismatch of \$0.01 when invoice charge distribution caused a rounding error. <p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> • NIB-562 – Fixed: Resolved an issue that caused multiple negative reconciliation line on Invoices in Coupa when a payment created in NetSuite was voided instantly without syncing it to Coupa • NIB-520 – Fixed: Fixed an issue that caused a script error when creating a payment for a vendor bill in NetSuite that was voided in Coupa. • NIB-573 – Fixed: Fixed an issue that synced incorrect credit memo amount to Coupa due to NS exchange rate issue. • NIB-556 – Fixed: Fixed an issue that was restricting the payment lines count to synced to coupa to 4000. <p>ER2ER report:</p> <ul style="list-style-type: none"> • NIB-598 – Fixed: Resolved an issue where the corporate checkbox at the line level of the Expense Report was getting checked for itemized expenses not related to the corporate card. <p>CoupaPay Charges Script:</p> <ul style="list-style-type: none"> • NIB-567 – New feature: Adding new feature to support Coupa R33 ghost card feature

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
9.0.0	2022-04-29	R33	2022.1	<p>Vendor Script:</p> <ul style="list-style-type: none"> • NIB-532 - Fixed an issue for customer fields mapping when mapping has 2 or more level depth • NIB-526 – Fixed an integration issue if empty/nonexistent lookup value selected on Vendor record. Empty/ nonexistent lookup value will be skipped. <p>COA Script:</p> <ul style="list-style-type: none"> • NIB-523 – Fixed an issue causing integration error when Parent Field ID was empty <p>Invoice Script 2.0:</p> <ul style="list-style-type: none"> • NIB 547 – Fixed an issue when fails error emails were sent out at every integration run • NIB-546 – Fixed an issue with date parsing for amortization date • NIB-535 – We have additional logic to check if an invoices/credit notes has been already integrated to NetSuite by also checking the document number on top of the externalID. This will prevent manually added invoice to NS being recreated by integrations. • NIB-533 & NIB-534 – Fixed an issue on invoice header charge (shipping, handling, misc.) distribution calculation validating both the percentage and amount. • NIB-552 – Added support to only update custom field if available to avoid integration failure <p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> • NIB-519 – Added support to sync NetSuite Payment to Coupa with external ID populated. Payments with ExternalID other than used by the NetSuite Bundle will be synced. <p>CoupaPay Invoice Payments Script:</p> <ul style="list-style-type: none"> • NIB-531 – Added “Virtual Card payment” text to the “note memo” field for Virtual Card payments <p>CoupaPay Charges:</p> <ul style="list-style-type: none"> • NIB-525 – Added Charge Issuer Reconciliation ID from charge object to custom field (“ custbody_coupa_issuer_recon_id”). This will help to reconcile charge to Issuer Statement (note not all Virtual Card Issuer supports this yet) <p>ER2ER report:</p> <ul style="list-style-type: none"> • NIB-536 – Fixed an issue for itemized expense lines not being set “corp card” when parent item was set “corp card” <p>Generic Update:</p> <ul style="list-style-type: none"> • NIB-549 – Added support for single currency account NetSuite environments

Format to be used on deployment parameter is “Coupa_Field_Path==NetSuite_Field==DataType” (e.g. created-at==custbody_coupa_memo==DATE; * payment-details.0.updated-at==custbody_date_custom_field==DATE) <p>Check Next Page for more NS Bundle 7.0.0 fixes/features</p>

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
7.0.0	2021-09-10	R31	2021.2	<p>CoupaPay Expense Report to ER Payments</p> <ul style="list-style-type: none"> • NIB-409 – New Feature - Added support for Netsuite instances where “multi-currency” option is not enabled • NIB-209 – Changed Coupa Payment date to be mapped from “released_at” date time rather than “updated_at”. This will ensure the correct date is used in Netsuite for the Payment. If required the old behaviour can be reset by adding deployment parameter “custscript_coupa_erpay_use_updated_at”. • NIB-423 - New Feature - Added Support for checkbox, multiselect and date type custom fields. Format to be used on deployment parameter is “Coupa_Field_Path==NetSuite_Field==DataType” (e.g. created-at==custbody_coupa_memo==DATE; * payment-details.0.updated-at==custbody_date_custom_field==DATE <p>Generic Update:</p> <ul style="list-style-type: none"> • NIB-331 – New Feature - Added support across all bundle scripts for new OAuth2 API token. Check the new Coupa API Feature here. API Key can be still used, no change required. Please check the Netsuite P2P Integration Document how to configure.
6.1.3	2021-08-05	R30	2021.1	<p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> • NIB-384 – Added ability to sync credits applied to Bill in NetSuite to Invoice in Coupa. This has been added to script 2.0 (in 6.1.2 it was rolled out to. 1.0 only)

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
6.1.2	2021-07-16	R30	2021.1	<p>Vendor Script:</p> <ul style="list-style-type: none"> • NIB-371 – Fix to handle special characters on customer fields correctly • NIB-376 - Sync Shipping Address as Primary Address & Billing Address as RTA. Fix added to set default billing address as Primary Address instead of shipping address. (When a Remit To address and Primary Address are included on a SIM record, the addresses are included on the resulting Vendor record in NS via the Coupa SIM integration. Then, the Coupa Vendor Integration overwrites the Coupa Supplier Primary Address with the Remit to Address. The script was setting the default billing address as Primary Address instead of shipping address.) • NIB-392 – Added a feature to mapping Netsuite Vendor's primary & secondary subsidiaries to Coupa Supplier record Content Group This feature complements NIB-326 earlier introduced on the SIM script earlier. New deployment parameter added as “custscript_vendor_content_grp_mapping”. Format: NetSuite_Subsidiary_Name1==Coupa_Content_Group1;NetSuite_Subsidiary_Name2==Coupa_Content_Group2s <p>Invoice Script:</p> <ul style="list-style-type: none"> • NIB-263 – Added support to define the integration error notification email sender on the deployment setup. New deployment parameter (list/record) added as “coupa_inv_error_email_sender” • NIB-370 – Fixed an issue were daylight saving was not taken into account at Bill posting causing invoice posted to incorrect period. New function will use daylight saving. • NIB-402 – Fixed an issue for incorrect custom field mapping for invoices with header charges and split billing. <p>Invoice and Expense Payment Script 1.0: (NS to Coupa)</p> <ul style="list-style-type: none"> • NIB-384 – Added ability to sync credits applied to Bill in NetSuite to Invoice in Coupa <p>ER2VB Script:</p> <ul style="list-style-type: none"> • NIB-391 – Fixed issue for custom segment mapping when split billing used. • NIB-388 – Fixed code issue so integration error notifications will be sent correctly • NIB-387 – Fixed a faulty behavior where integration thrown an error when Employee Vendor record is not found in NS, but integration marked ER exported. This has been fixed and if Vendor record not found, ER will remain unexported. • NIB-372 – Added support to handle multiple corporate card vendors. If the deployment contains the mapping for corporate card vendors, it would be given first priority, if the mapping is not available then the corporate card vendor mapping would be referred to set the Vendor. New deployment parameter (text) added as “coupa_er2vb_corporate_mapping”. Mapping format : “expense-lines/integration/code==internal_netsuite_vendor_id” ; example: “corpcc.master==18555;corpcc.visa==3456;corpcc.mastercard==3457” <p>Check next page</p>

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
6.1.2	2021-07-16	R30	2021.1	<p>ER2ER report:</p> <ul style="list-style-type: none"> • NIB-383 – Fix issue for Class segment not populating when split billing used • NIB-396 – Added support to check Coupa corporate card line-level checkbox based on external-src-name field. New deployment parameter (checkbox) added as “coupa_er_corporate_card” • NIB-382 – Fixed incorrect integration error email subject line to reflect Expense Report correctly • NIB-400 – Added support to have reimbursable field mapping optional for feature introduced in NIB-340. Feature will be enabled if new deployment parameter (checkbox) ticked. New deployment parameter added as “coupa_er_enable_reimbursable” <p>CoupaPay Charges Script:</p> <ul style="list-style-type: none"> • NIB-397 – Fixed an issue to prevent charges marked exported in case of an API call timeout. <p>CoupaPay Expense Report to Vendor Bill Payments</p> <ul style="list-style-type: none"> • NIB-386 – New parameter added to support defaulting Department, Class & Location from Script parameter or Expense Report. New Deployment Parameter added as “custscript_coupa_erpai_headdept”. Example value: “3==3882;3==87;3==2” • NIB-368 – Added support for custom field mapping. New deployment parameter (text) added as “coupa_er2vbpay_header_custfil”. Examlle “pay-from-account.id==custbody_custom_field” <p>CoupaPay Expense Report to ER Payments</p> <ul style="list-style-type: none"> • NIB-367 – Added support for custom field mapping. New deployment parameter (text) added as “coupa_erpai_header_cust_field”. Examlle “pay-from-account.id==custbody_custom_field” <p>Generic Update: NIB-399 – API key removed from Execution logs for security reasons</p>
6.0.2 (emergency)	2021-05-17	R30	2021.1	<p>SIM script:</p> <ul style="list-style-type: none"> • NIB-385 – New parameter added in 6.0.1 to support multi subsidiary selection was set mandatory stopping the script if the parameter doesn't present. It has been fixed to be optional

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
6.0.1	2021-05-10	R30	2021.1	<p>Invoice Script:</p> <ul style="list-style-type: none"> NIB-351 - Incorrect distribution of charge amounts amongst invoice lines causing the addition of negative total line on Vendor Bill. Fixed the proportion formula which resulted in negative charge calculation. NIB-356 – in case of Negative cut-off date fixed the Condition in Posting Period block to keep the Posting Period the same month when the current year and Invoice year do not match NIB-378 – in case of Positive cut-off date the Condition in Posting Period block has been modified to check the month difference and setting the same month as the posting period if the current month is less than the Invoice month. NIB-344 - Added support for special characters in the invoice number field NIB-359 – Added fix to handle negative lines correctly on Credit Notes when posting to Netsuite <p>Invoice and Expense Payment Script 2.0: (NS to Coupa)</p> <ul style="list-style-type: none"> From Bundle Release 6.0.1 Invoice and Expense Payment Script 2.0 is introduced. Please use this new script. Invoice Payment Script 1.0 script will be updated only with P1 fixes going forward and will be decommissioned from release 8.0.0 NIB-357 – New Feature – Added support for Netsuite Expense Report Payment to be integrated to Coupa to Netsuite. Script name has been update to “Invoice and Expense Payment” NIB-299 - The script exposed API-Key in script logs causing security risk as. Fix removes API Key getting displayed in script logs. <p>CoupaPay Invoice Payments Script :</p> <ul style="list-style-type: none"> NIB-335 – New Feature – Coupa Invoice Payment URL field added on Payment record to allow users to get to Coupa Payment with a click in NS NIB-338 – New Feature – Added support for custom Header field mapping. <i>New deployment parameter added (custscript_coupa_pymt_header_cust_fields ; example mapping: digital-check.check-number==custbody_custom_field)</i> NIB-362 – Fixed an issue when in certain conditions payment in cancelled status did not get integrated to Netsuite. NIB-361 – Fixed Script to include Invoice Payment with Credit Card Payments also <p>CoupaPay Expense Report (to Vendor Bill & to ER) Payments</p> <ul style="list-style-type: none"> NIB-335 – New Feature – Coupa ER Payment URL field added on Payment record to allow users to get to Coupa Payment with a click in NS <p>CoupaPay Charge Script:</p> <ul style="list-style-type: none"> NIB-335 – New Feature – Coupa Charge URL field added on Netsuite Credit Card Transaction to allow uses to get to Coupa Charge with a click in NS <p>Vendor Script:</p> <ul style="list-style-type: none"> NIB-353 – Log Level changed to “Debug” in case no primary contact found n Vendor record. This will ensure script doesn’t fail when no primary number found

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
6.0.1	2021-05-10	R30	2021.1	<p>SIM Script:</p> <ul style="list-style-type: none"> NIB-326 – New Feature – Added Support for Multi Subsidiary assignment on SIM form. Script will create the Vendor record and set subsidiaries in the subsidiary sub list. <i>New deployment parameter added (custscript_coupa_sim_subs_multiselect)</i> NIB-352 - Log Level changed to “Debug” in case no primary contact found in Vendor record. This will ensure script doesn’t fail when no primary number found <p>ER2ER report:</p> <ul style="list-style-type: none"> NIB-340 – New Feature - added mapping between the Coupa reimburse to employee field and NetSuite non-reimbursable. Script will automatically check Coupa “isreimbureable” flag and set it on line level in NS to automate the process even more. <p>Exchange Rate Script:</p> <ul style="list-style-type: none"> From Bundle Release 6.0.1 Exchange Rate script 2.0 is introduced. Please upgrade to use this new script. Exchange Rate script 1.0 script will be updated only with P1 fixes going forward and will be decommissioned from release 8.0.0 NIB-306 – New Feature – Upgrading Exchange Rate script to Map Reduce 2.0. <i>New Deployment Parameters added to support Error Email. (custscript_coupa_fxrate_mr_error_to & custscript_coupa_fxrate_mr_error_to new optional parameters added)</i> <p>COA Script:</p> <ul style="list-style-type: none"> NIB-339 – Added support on Lookup Name for special characters. <p>Generic Update:</p> <ul style="list-style-type: none"> NIB-360 – In preparation for NS 2021.2. the HMAC-SHA1 signature method will not be supported in 2021.2. The signature for the Bundle Installation script has been updated to use the HMAC-SHA256 signature method.

When the SUBS_CURR_ID from the mapping matches the subsidiary currency the account from mapping provided will be used and set on the payment transaction. <ul style="list-style-type: none"> ○ Mapping with 4 tuples should be provided prior to 3 tuple mapping(CPA_ID==NS_ACCOUNT==SUBS_ID) to use the 3 tuples mapping as the default mapping in case no 4 tuples mapping is matched for that specific subsidiary. ○ Currency Id in the mapping associated with the NetSuite payment account should be the same as that on the Pay From Account currency in Coupa. ● NIB-323: Fix added to correctly support multiple invoice void in one payment <p>CoupaPay Expense Report (to Vendor Bill & to ER) Payments:</p> <ul style="list-style-type: none"> ● NIB-312: Added a new function to source currency from the subsidiary of the vendor bill. When the SUBS_CURR_ID from the mapping matches the subsidiary currency the account from mapping provided will be used and set on the payment transaction. <ul style="list-style-type: none"> ○ Mapping with 4 tuples should be provided prior to 3 tuple mapping(CPA_ID==NS_ACCOUNT==SUBS_ID) to use the 3 tuples mapping as the default mapping in case no 4 tuples mapping is matched for that specific subsidiary. ○ Currency Id in the mapping associated with the NetSuite payment account should be the same as that on the Pay From Account currency in Coupa. <p>Vendor:</p> <ul style="list-style-type: none"> ● NIB-332 – changed saved search filter with Formula filter for an exact match of vendor Id <p>Expense Report:</p> <ul style="list-style-type: none"> ● NIB-343 - Added support for DD/MM/YYYY Date Format by fetching current company date format dynamically and converting coupa date to NS date <p>Invoice Payment (from NS to Coupa):</p> <ul style="list-style-type: none"> ● Script updated to 2.0 Map/Reduce type to. Performance improvement
5.0.2	2021-01-18	R29	2020.2	<p>Invoice Script:</p> <ul style="list-style-type: none"> ● NIB-330 – Resolved an issue to correctly support R29 feature to move Invoice from payment channel “ERP” to “CoupaPay”

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
5.0.1	2021-01-18	R29	2020.2	<p>Dynamic Discounting script:</p> <ul style="list-style-type: none"> • New Feature/Script: new script to support the Dynamic Discounting feature introduced in R29. Coupa customers can allow Suppliers to participate in Dynamic Discounting. In this process, the Supplier can offer an Early Payment Discount (EPD) on an Invoice. Customers can accept or reject the EPD. The Script will use the Coupa PayInvoice status to mark NS Bills on Hold Payment while the Dynamic Discounting process is running. Once EPD process is finished NS Bill will get updated with EPD specific Payment Term and Hold Payment flag gets removed to get paid in Netsuite. <p>Netsuite Bundle DashBoard:</p> <ul style="list-style-type: none"> • New Feature: Added a Dashboard Portlet to display Update Available Notification when Coupa Bundle is updated. Please check the DashBoard User Guide how to set it up. <p>Invoice Script:</p> <ul style="list-style-type: none"> • NIB-315 – ability use externalID when setting header charges value. added scrip parameter header shipping and handling line charges can be set NS values using External IDs • NIB-311 – added Script parameter to exclude invoices with “Payment Channel” “CoupaPay - Virtual Card Payments” to integrate to NS (for VC on PO use case) • NIB-76 - Support negative cut-off day to push Invoices to next Posting Period. If negative Posting Period Cutoff day is provided as a script parameter, the Invoices or Credit Note synced in the (Total days of the Month - Posting Period Cutoff day) period will be posted to the next Posting period. • NIB-220 - Summary Level Charges were not correctly syncing to NS for negative amount Invoices. Added a flag to verify if the document-type is an invoice and the total amount is negative. In case the total is negative negate the charges amount to match the Invoice total with the CN total in NS. <p>COA Script:</p> <ul style="list-style-type: none"> • NIB-307 - Added new function getRecordIdByExternalId which would verify if use external Id checkbox is checked and if checked it would search the internal Id for the external Id provided which would not cause any script issue • NIB-304 - Added support for subsidiaries if Multi-select field present on a Segment <p>CoupaPay: Invoice Payment Script: (Coupa to NS)</p> <ul style="list-style-type: none"> • NIB-314 – Modified coupa invoice not found Error log to Audit log. Added script parameter to skip 404 error log and skip the Error email and an Audit log will be added to Execution logs. • NIB-320 –When a payment with Credit Note and Invoice is synced when in INITIATED status from Coupa if the payment gets an error and moves to a status "Completed with Errors", the errored payments are synced with NetSuite. The script voids the payment but NetSuite does not remove(revert/detach) the linked Credit Note to the Vendor Bill automatically. Fix added to revert linked CreditNotes to Invoices when Payment status is completed_with_errors.

NS Bundle	Release Date	Coupa Release	NS version	Release Notes
5.0.1	2021-01-18	R29	2020.2	<p>ER2VB Script:</p> <ul style="list-style-type: none"> • NIB-255 - Corp Card Vendor added to the script deployment. Added new optional script parameter, The field can be a select field with a list of vendor OR a text field with the internal Id of the vendor. If the externalSrcName is not blank or web the Expense will be considered as Corp Card Expense and the selected Vendor in the parameter will be set as the Entity on the Vendor Bill instead of the actual expensed by user Vendor record. <p>Vendor Script:</p> <ul style="list-style-type: none"> • NIB-319 - Contact's First Name, Last Name & Phone Number were not sent when skip phone number script param is checked. Added fix to send Contact First Name, Last Name & Phone Number when skipped phone number script parameter is set to T <p>ER2ER Script:</p> <ul style="list-style-type: none"> • NIB-318 - Incorrect Subsidiary were retrieved. Fix added to fetch correct subsidiary <p>Generic Updates:</p> <ul style="list-style-type: none"> • NIB-328 – Updating scripts to support NS annotation 2.1 for NS 2021.1 (Coupa-PayExpensePayments, Coupa-PayExpense2VBPAYMENTS, Coupa-PayPayments, Coupa-SIM, Coupa-Charges, Coupa-ER2VB, Coupa Bundle Installation script)
